Special accommodations

To request ADA accommodation for disabilities, or printed materials in a format for the visually impaired, call Ecology at (360) 407-7455 or visit www.ecy.wa.gov/accessibility.html. Persons with impaired hearing may call Washington Relay Service at 711. Persons with speech disability may call TTY at (877) 833-6341.

About the Western Response Resource List (WRRL)

Oil spill contingency plan holders in Washington State have access to a web-based database of oil spill response equipment. The Western Response Resource List (WRRL) outlines various types of response equipment maintained by participating private and public response organizations in the Pacific Northwest.

The Department of Ecology, the U.S. Coast Guard, other state and federal agencies, and participating public and private response entities urge oil spill contingency plan holders, contractors, vendors, and others to use the WRRL to list their response equipment.

How the WRRL can help

The WRRL allows oil spill preparedness planners and responders to:

- Use a system for describing, cataloging, ordering, and tracking oil spill response equipment.
- Display data to develop and review oil spill contingency plans.
- Evaluate spill readiness drills (including lessons learned) and improve responses.
- Describe a uniform method for ordering equipment from multiple sources during spills.
- Keep accurate cost accounting information during responses.
- Plan effective equipment demobilization after spill incidents.

Accessing the WRRL

The WRRL is hosted by Genwest Systems at <http://www.wrml.us>. The WRRL can be downloaded in a variety of formats and viewed as a guest (without a password).

To become a contributing member, email alh@genwest.com.

Using the WRRL

Standardized equipment information

Response organizations in the Northwest have agreed on "resource" and "kind and type" labels for response equipment based on capabilities, size, and use. All equipment found on the WRRL is categorized by these designations. Use the Kind-Type Reference for information about how to appropriately list your equipment.

Advance planning and drill design

Companies that must develop oil spill contingency plans for state and federal authorities can use the WRRL to develop lists of equipment. They may refer to the WRRL in their written contingency plans.

The WRRL maintains the following information:

- Stored equipment locations.
- Oil skimming assets' estimated daily recovery capacities.
- Temporary storage capacity for barges, vacuum trucks, tanks, and bladders.

Related information

Ecology's Spills Program maintains an equipment map based on the WRRL data, which can be accessed at:

https://fortress.wa.gov/ecy/coastalatlas/storymaps/spills/spills_sm.html.

For an overview of how the state uses the WRRL data to verify planning standard details and ensure plan adequacy, visit:
