FORMAL CLEANUPS

Ecology oversees complex cleanup sites to ensure that your health and that of the environment are protected.

CLARK COUNTY

Camp Bonneville Military Reservation **Facility Site ID# 5093080**
Clark County

Negotiations Under Way for an Amended Prospective Purchaser Consent Decree

Ecology is negotiating an Amended Prospective Purchaser Consent Decree with Clark County for the Camp Bonneville Military Reservation located about 5 miles northeast of Vancouver.

Camp Bonneville consists of almost 4,000 acres of forested land previously owned by the U.S. Army and leased from the State Department of Natural Resources. It was used from 1910 to 1995 for firing range practice. The camp closed in 1995. Since then, investigations have been ongoing to characterize the contamination from the ammunitions and other hazardous substances and to develop a plan for re-using the site as a park once it's cleaned up.

In March 2006, Ecology, the Bonneville Conservation Restoration and Renewal Team (BCRRT) and Clark County signed a Prospective Purchaser Consent Decree. The decree outlined the cleanup process and schedule for Camp Bonneville, with BCRRT leading the cleanup work.

Ecology and the county are negotiating the terms under which the county might lead the cleanup work. The Army will continue to pay for cleanup.

Ben.Forson@ecy.wa.gov

Pacific Wood Treating **Facility Site ID# 1019** **CSID# 3020**
111 West Division Street, Ridgefield

Public comment period for : 4/25/11 – 5/25/11

Public comment period for SEPA: Ended 5/9/11

Draft Interim Action Work Plan Available for Public Comment

Ecology invites the public to comment on a draft interim action work plan for the Pacific Wood Treating site. A separate comment period on a State Environmental Policy Act (SEPA) determination and checklist has closed.

From 1964 to 1993, Pacific Wood Treating operated on the site. The company pressure-treated wood products with oil-based treatment solutions containing creosote, pentachlorophenol (PCP), and a water-based mixture of copper, chromium and arsenic. In 1993, the company declared bankruptcy.

In 1996 and 2001, Ecology and the Port of Ridgefield entered into agreed orders to clean up contamination on the site, in Ridgefield National Wildlife Refuge and in Lake River.

Site Manager

Craig Rankine

For public involvement information, contact Diana Smith at 360/ 407-6255 or Diana.Smith@ecy.wa.gov.

GRANT COUNTY

Warden City Supply Wells 4 & 5 Site **Facility Site ID# 2802409 CSID# 1618**
1800 First Street, Warden

Public comment period: 4/26/11 – 5/25/11

Agreed Order, Scope of Work, and Public Participation Plan Available for Public Comment

Ecology plans to enter into an Agreed Order with the J.R. Simplot Company. The order requires Simplot to complete a Remedial Investigation and Feasibility Study at the site located at 1800 First Street, Warden, Grant County.

During past investigations, some soil on Simplot property and water in wells 4 and 5 showed ethylene dibromide (EDB) contamination. The city shut down Well 4, and Well 5 is for emergency use only. Drinking water now comes from Wells 6 and 7.

The investigation will provide more information about contamination at the site and will look for additional sources of the contamination. The study will identify and evaluate cleanup alternatives.

You may submit comments and questions from April 26 through May 25, 2011, to Sandra Treccani, Department of Ecology, 4601 N. Monroe, Spokane, WA 99205-1295 or to Sandra.Treccani@ecy.wa.gov. For information, call 509/ 329-3412.

SeaTac Development Site (MasterPark Lot C) Facility Site ID# 38258847
16025-16223 International Boulevard, SeaTac

CSID# 5994

Public comment period: 4/29/11 – 5/31/11

Draft Remedial Investigation/Feasibility Study Report, Draft Cleanup Action Plan, and State Environmental Policy Act Determination Available for Comment

Ecology invites comments on the Draft Remedial Investigation/Feasibility Study (RI/FS) Report, Draft Cleanup Action Plan (CAP), and State Environmental Policy Act Determination for SeaTac Development (also known as Master Park Lot C Facility) Site. This site is generally located at 16025-16223 International Blvd. in SeaTac. The Remedial Investigations explain the amount, type, and location of the contamination and the Feasibility Studies identify the cleanup options and select the preferred option or options.

Site Manager **Jerome Cruz**

ConocoPhillips Renton Terminal Site Facility Site ID# 2070
2423 Lind Avenue SW, Renton

CSID# 29

Public comment period: 4/29/11 – 5/31/11

Draft Remedial Investigation/Feasibility Study Work Plan, and revised Interim Monitoring Compliance Plan Available for Comment
Ecology invites comments on the Draft Remedial Investigation/Feasibility (RI/FS) Work Plan and revised Interim Compliance Monitoring Plan for the ConocoPhillips Renton Terminal site. This site is generally located at 2423 Lind Avenue SW, Renton.

The Work Plan details how the RI/FS study will be carried out to investigate the nature and extent of contamination at the site. The revised interim Compliance Monitoring Plan is an addendum to the interim remedial action plans for remediation systems presently operating at the site. It integrates the interim groundwater monitoring activities, remedial system operation reporting, and system performance monitoring at the site.

Site Manager **Jerome Cruz**

Since 2001, Olympic View Sanitary Landfill Inc. has followed the State Model Toxics Control Act process for cleaning up sites. In November 2010, Ecology provided the draft Remedial Investigation and Feasibility Study reports and draft Cleanup Action Plan for public review. The Cleanup Action Plan is now final; Ecology and Waste Management of Washington Inc. will enter into an Agreed Order to implement the Cleanup Action Plan. The order requires Waste Management to implement the elements of the Cleanup Action Plan and includes a schedule for submitting specific documents and requirements for ongoing reporting. Attachments to the order include the Cleanup Action Plan and an Environmental (Restrictive) Covenant that establishes limits on the use of the landfill property.

PIERCE COUNTY

Port of Tacoma (Kaiser Aluminum) Facility Site ID# 38
3400 Taylor Way, Tacoma
Public comment period: 4/21/11 – 5/20/11

Agreed Order for Cleanup Available for Public Comment

Ecology invites comment on an Agreed Order with the Port of Tacoma for cleanup of the Port of Tacoma Kaiser site. The site sits on 96 acres in the Tacoma tideflats at 3400 Taylor Way. Kaiser Aluminum Company operated an aluminum smelter and manufacturing plant there for over 60 years. After some cleanup by Kaiser Aluminum, the port will now address remaining contamination. Ecology is also taking comments on closure plans for two dangerous waste management units at the site. These include two storage areas for spent potliner – an asphalt-like substance that lined the metal pots Kaiser smelted aluminum in.

Site Manager: **Marv Coleman**

Pederson Fryer Farms Inc. **Facility Site ID# 6261637**
2901 72nd Street East, Puyallup

Public comment period: 4/21/11 – 5/20/11

Work Plan to Investigate Contamination Available for Public Comment

Ecology is investigating the Pederson Fryer Farms Inc. site at 2901 72nd Street East, Puyallup. Underground storage tanks at the former poultry processing plant leaked petroleum into soil and groundwater. Ecology is managing the cleanup process, which will be paid for by an insurance company. The work plan for a Remedial Investigation and Feasibility Study is available for public comment.

Alpine Plating Facility Site ID# 1278

1551 Center Street, Tacoma

Public comment period: 5/20/11 – 6/20/11

Five-Year Review Report Available for Public Comment

Ecology invites you to review and provide comment on a periodic (5-year) review of the Alpine Plating cleanup site, a former metal plating facility. Portions of the building and soils at the site were contaminated by spills and improper chemical handling, storage and disposal. During investigations of the site, copper, cadmium, chromium, nickel and lead were found above cleanup levels. From 1999-2000, cleanup actions were conducted under an U.S. Environmental Protection Agency administrative order. An environmental covenant is in place for the site. The covenant prohibits activities that could result in the release of contaminants that remain at the site. Ecology reviews cleanups at least every five years to ensure they protect human health and the environment. The cleanup appears to be protective of human health and the environment.

Site Manager: **Guy Barrett**
Southwest Regional Office
360/ 407-6259
Guy.Barrett@ecy.wa.gov

SKAGIT COUNTY

Skagit County Port Taxiway F Site Facility Site ID# 67457634

Skagit Regional Airport, Burlington

Public comment period: 4/29/11 – 5/31/11

Final Remedial Investigation and Feasibility Study, Consent Decree, Cleanup Action Plan, State Environmental Policy Act Determination, and Public Participation Plan Available for Public Review

Ecology invites comments on several documents related to a site located at an aircraft hangar adjacent to Taxiway F at the Skagit Regional Airport in Skagit County. The documents are Final Remedial Investigation and Feasibility Study, Consent Decree, Cleanup Action Plan, State Environmental Policy Act (SEPA) Determination of Non-Significance, and Updated Public Participation Plan for this site. The site includes a hangar and surrounding area used for crop dusting operations between 1978 and about 2000. Crop dusting operations released chemicals of concern including pesticides, fungicides, herbicides and Thiodan (trade name for endosulfan) into shallow soils and groundwater and possible runoff into adjacent surface water drainage channel and wetlands. The surrounding area to the north, east, and south is airport property and mostly pasture and forested wetland. The property to the west, across Taxiway F, is the PACCAR Technical Center.

Ecology and the Port of Skagit County propose to enter into a legal agreement called a Consent Decree. Under this decree, the Port will clean up the site as described in the decree's Cleanup Action Plan. This comment period provides an opportunity for public involvement and for you to review and comment on the mentioned documents as described in the Public Participation Plan. The Cleanup Action Plan describes the proposed cleanup tasks and includes the following tasks:

- Remove or shore up the above-ground structures in order to access underlying contaminated soil.

- Implement erosion control and site security measures.
- Clear vegetated areas within the drainage channel and wetland areas.
- Excavate the contaminated soil and disposed at a permitted facility off-site.
- Backfill the excavations with clean, imported fill material.
- Conduct compliance monitoring for soil and groundwater to confirm all known contamination has been removed and site achieves state cleanup levels.
- Wetland vegetation restoration and monitoring.

Ecology has completed a SEPA review of the proposed Remedial Action. Ecology determined that the proposed actions do not have a significant adverse impact on the environment and issued a Determination of Non-Significance (DNS).

Site Manager: **David South**
Northwest Regional Office
425/ 649-7200
David.South@ecy.wa.gov

SPOKANE COUNTY

Holcim Inc. **Facility Site ID# 52126416** **CSID# 4580**
12207 East Empire, Spokane Valley

Negotiations Begin for an Agreed Order

Ecology began negotiations for an Agreed Order on March 21, 2011, with Holcim (US) Inc. and the City of Spokane Valley. Holcim and the City own property where the site is located. Negotiations are expected to be completed in 60 days.

The Agreed Order is necessary because cement kiln dust (CKD) remains in two locations on the property as a result of past cement manufacturing. CKD is found on the Holcim property on the north plateau portion of the land. A smaller deposit is located on property owned by the City.

CKD may contain arsenic, cadmium and lead. Past studies found arsenic in groundwater at levels that exceeded state standards. Although groundwater flows away from the nearby Spokane River, more details are needed about contamination at the site.

The Remedial Investigation will help identify the type of contamination and where it is located. The Feasibility Study will identify and evaluate cleanup alternatives.

Site Manager: **Jeremy Schmidt**
Eastern Regional Office
509/ 329-3484
Jeremy.Schmidt@ecy.wa.gov

Kaiser Trentwood Site **Facility Site ID# 53481373** **CSID# 7093**
15000 East Euclid Avenue, Spokane Valley

April 2011 Site Update

Kaiser Trentwood currently produces aluminum sheet, plate, and coil for aerospace and general engineering applications. Materials used in past aluminum production included PCB oil, petroleum fuels, solvents, and chromium. Wastes generated as a result of past or present operations consist of wastewaters, chrome sludge, paint and solvent wastes, and black dross.

Several releases of contamination have occurred at the Kaiser Trentwood site due to historical operations. Kaiser investigated the contamination and conducted cleanup actions to address groundwater and soil contamination coming from these releases.

In 2010, Kaiser completed a Remedial Investigation of nine areas at the site. The purpose of the investigation was to obtain a more comprehensive understanding of contaminants in soil and groundwater, where they were located, and how much was present at the site.

Since completion of the investigations in 2010, Ecology determined additional investigations are needed in the ravine area of the site. This work will more clearly define possible sources of PCB contamination in groundwater. This information is necessary to complete the draft Feasibility Study. The Feasibility Study evaluates information from the investigations and outlines cleanup options for contaminants still in soil and groundwater at the site.

The Remedial Investigation and Feasibility Study Reports will be available for public comment in 2012. The timeline for completion of these documents has been extended to incorporate new information that will be gathered from the ravine investigations.

More details about the investigations may be found in the fact sheet at the link below:

http://www.ecy.wa.gov/programs/tep/sites/Kaiser_trentwood/kaiser_tw_hp.html

Questions about the site may be directed to Teresita Bala, 509/ 329-3543 or e-mail Teresita.Bala@ecy.wa.gov.

NEWS & NOTES

Ecology is updating the CLARC Web Application

The Cleanup Level and Risk Calculations (CLARC) web application has been updated to reflect current toxicity values developed by the U.S. Environmental Protection Agency (EPA).

CLARC is a web application tool developed by Ecology that uses the equations and default input parameters in the MTCA Cleanup Regulation to calculate cleanup levels. This tool is intended to help Ecology site managers and others gather the information needed to set cleanup standards and make decisions according to the requirements in the regulation.

To remain useful as a tool, CLARC needs to reflect current toxicity information. Ecology completed the most recent update in April 2011.

GLOSSARY

Agreed Order - A legal agreement with Ecology to make sure the cleanup meets the standards of Washington State's cleanup law, the Model Toxics Control Act (MTCA).

Cleanup Action Plan (CAP) - A document that describes the selected cleanup method(s) and specifies cleanup standards and other requirements. It is based on information and technical analyses generated during the RI/FS and consideration of public comments and community concerns. A draft of the CAP (DCAP) is made available for public review and comment before finalizing.

Comment Period - A time period during which the public can review and comment on various documents and Ecology or EPA actions. For example, a comment period is provided to allow community members to review and comment on proposed cleanup action alternatives and proposed plans. Also, a comment period is held to allow community members to review and comment on draft feasibility studies.

Consent Decree - A formal legal agreement that is filed with a court. It describes studies and/or cleanup work to be done at a site and the terms under which that work is to be done.

Engineering Design Report - Engineering design reports outline the specific details for implementation and operation of the first phase of the cleanup actions.

ERTS - Environmental Response Tracking System

Five-Year Periodic Review - A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

Hazardous Sites List - A statewide list of contaminated properties. Ecology may remove a site from the list only after determining that all remedial actions except confirmational monitoring have been completed and compliance with the cleanup standards has been achieved at the site, or the listing was erroneous.

Independent Cleanup Action - Any remedial action without department oversight or approval and not under an order or decree

LUST - Leaking Underground Storage Tank

NFA - No Further Action

PSI - Puget Sound Initiative

Publication Participation Plan - Outlines and describes the tools Ecology will use to inform the public about site activities, and it identifies opportunities for the community to become involved in this process.

RCW - Revised Code of Washington

Remedial Action - Construction work done to clean up a contaminated site.

Remedial Investigation/Feasibility Study - Two distinct but related studies. They are usually performed at the same time, and together referred to as the "RI/FS."

Responsiveness Summary - A summary of oral and/or written public comments received by Ecology during a comment period on key documents, and Ecology's responses to those comments.

RI/FS - See Remedial Investigation/Feasibility Study

SEPA - State Environmental Policy Act

SHA, Site Hazard Assessment - An assessment to gather information about a site to confirm whether a release of hazardous substances has occurred and to enable Ecology to evaluate the relative potential hazard posed by the release.

UST - Underground Storage Tank

UXO - Unexploded Ordnance

VCP - Voluntary Cleanup Program

Voluntary Cleanup Program (VCP) - The VCP is one of several options for cleaning up a hazardous waste site under the state's cleanup law. Under this option, property owners may perform a cleanup independently and request services from Ecology for a fee.

WAC - Washington Administrative Code

WARM, Washington Ranking Method - The method used to rank sites placed on the Hazardous Sites List.

Additional glossary terms may be found on the Ecology website at:

http://www.ecy.wa.gov/programs/tcp/tcp_acronym_list.htm

SITE INFORMATION ONLINE
