Chapter 1: Funding Programs Overview

The Washington State Department of Ecology's (Ecology) Water Quality Program administers three main funding programs under an integrated annual funding cycle. Ecology awards grants and loans on a competitive basis to eligible public bodies for high priority water quality projects throughout Washington State. Proposed projects address point and nonpoint source water pollution control issues. This document describes how to apply for funding, meet program requirements, and manage funded projects.

The three main funding programs are:

- The Centennial Clean Water Program (Centennial).
- The Clean Water Act Section 319 Nonpoint Source Grant Program (Section 319).
- The Washington State Water Pollution Control Revolving Fund Program (Revolving Fund).

Eligible public bodies include:

- Counties, cities, and towns.
- Water districts, sewer districts, and other special purpose districts.
- Conservation districts.
- Political subdivisions.
- Municipal or quasi-municipal corporations.
- Federally recognized tribes.
- Washington State institutions of higher education (if the project is not included in the institution's statutory responsibilities).
- Not-for-profit organizations that are recognized as tax exempt by the Internal Revenue Service (eligible for Section 319 funding only).

Eligible project types include:

- Wastewater facility
 - Planning, environmental review, design, and construction.
 - Facilities for wastewater conveyance and treatment.
 - Combined sewer overflow (CSO) abatement.
 - Infiltration and inflow (I/I) correction.
 - Water reclamation and reuse, including reclaimed water distribution.
- Nonpoint source activity
 - Agricultural best management practices design and implementation.
 - Demonstration projects (as approved by Ecology).
 - Groundwater/aquifer/source water/wellhead planning and/or protection.
 - Lake restoration planning and implementation.
 - Riparian/wetland restoration planning and implementation.

- Public outreach and education.
- Total maximum daily load (TMDL) support.
- Water quality monitoring.
- Watershed planning and implementation.
- Onsite Sewage System
 - Community systems (planning, design, and construction).
 - Planning/survey.
 - Repair/replacement program.
- Stormwater
 - Low impact development techniques.
 - Outreach and education.
 - Source control activities.
 - Stormwater pollution control facilities.
 - Stormwater retrofit.
 - Stormwater best management practices.

Statutory requirements, administrative rule uses and limitations, and program and agency policy provide the framework for the Funding Guidelines. Listed below are the key statutes, rules, and policies, along with web links to the documents.

Chapter 2: Available Funding

Funding levels for the Water Quality program vary from year to year based on a variety of factors including federal and state legislative decisions, special one-time appropriations, and Revolving Fund repayment schedules.

The funding programs

Ecology manages the three main sources of water quality funding under an integrated annual funding cycle. Applicants use one integrated financial assistance application to apply for Water Quality funds from all three funding sources. Ecology distributes funds to the highest priority projects in a combination of grants and loans depending on the project type and funding source.

Revolving Fund

The United States Congress established the Revolving Fund as part of the Clean Water Act (CWA) Amendments of 1987. The Environmental Protection Agency (EPA) offers states capitalization grants each year according to a formula established in the CWA. The state must provide a 20 percent match of the Capitalization Grant; the state match comes from the Public Works Assistance Account managed by the Washington State Treasurer's Office. Each year Ecology estimates the funds from the Capitalization Grant, state match, known and expected repaid principal and interest from previous loans, interest earned through investments by the Washington State Treasurer's Office, early repayments of previous loans, declined offers, and differences between offers and agreements, and the combined total is offered in new loans to eligible public bodies.

Due to repayment of previous loans and interest plus infusions from the Capitalization Grant, state match, and investments, the Revolving Fund continues to revolve and grow, and more money becomes available to fund water quality projects. The majority of the fund now consists of repaid principal and interest. The Revolving Fund has funded approximately \$1.3 billion in projects since its inception.

Eligible funding categories

- Preconstruction (forgivable principal available for hardship).
- Facility
 - Wastewater (grants, forgivable principal, and subsidized loans available for hardship).
 - Stormwater.
 - Large onsite sewage system (grants and subsidized loans available for hardship).
 - Green project reserves (a component of the categories listed above).
- Activities
 - Nonpoint source planning and implementation.
 - Low impact development stormwater (forgivable principal available associated with green project reserve).
 - Local loan fund for onsite sewage repair and replacement.
 - Green project reserves (a component of the categories listed above).

After subtracting the green project reserve amount from the available Revolving Fund moneys, Ecology splits the remaining moneys with five percent dedicated for preconstruction, 75 percent dedicated for facilities, and 20 percent dedicated for activities. Of the Revolving Fund loan set aside for preconstruction projects, Ecology will award no more than 20 percent for a single project. In both the facility and activity funding categories, Ecology will award no single project more than 50 percent of the available Revolving Fund loan funds.

Funding provisions

Preconstruction

Eligible preconstruction projects include facility planning, facility design, rate studies, sewer use ordinance, and value engineering. Applicants with a population of 25,000 or less and a Median Household Income (MHI) below the state MHI are eligible for funding under the preconstruction category. Applicants who do not meet either the population or MHI criteria for this category can still apply for preconstruction projects in the facilities category.

Hardship

Ecology may offer a combination of hardship grants from Centennial, forgivable principal loans, and subsidized loans for facility preconstruction or construction projects, and onsite sewage repair and replacement local loan fund projects. Ecology will offer Centennial grant funds to the highest ranking eligible hardship applicants first. Once Centennial grant funds have been exhausted, Ecology will offer available Revolving Fund forgivable principal loans to remaining eligible hardship applicants until forgivable principal funds are exhausted.

Congress has authorized the use of forgivable principal loans since the Federal Fiscal Year 2010 (FFY10) CWA appropriation. Forgivable principal means the portion of a loan that is not required to be paid back by the borrower. The amount of forgivable principal is limited. Ecology may offer forgivable principal loans in the State Fiscal Year 2015 (SFY15) funding cycle if authorized by Congress in the CWA FFY14 appropriation.

If Ecology offers only partial funding to a hardship eligible project due to insufficient funding availability, Ecology may place the project at the top of the priority funding list for the next funding cycle. The applicant must be able to demonstrate that the project can be completed within the allowable funding timeframe in order to be placed on the priority funding list for the next funding cycle.

Hardship for wastewater facility construction projects

Wastewater facility construction projects funded through the Revolving Fund are eligible for financial hardship consideration if the project meets the following criteria:

- The existing residential population of the service area for the proposed project is 25,000 or less at the time of application.
- Financing the project without subsidy would cause existing residential sewer fees to be two percent or more of the median household income (MHI) for the service area.

If Ecology determines that financial hardship exists, it may structure an offer that includes a combination of grant, forgivable principal loan, and subsidized loan terms. Table 1 shows the hardship interest rate and grant/forgivable principal continuum.

Table 1: SFY14 Hardship Interest Rates and Grant/Forgivable Principal Continuum

Sewer Fee divided by MHI:	Below 2%	2% and above but below 3%	3% and above but below 5%	5% and above
Hardship Designation:	Non-hardship	Moderate	Elevated	Severe
20-Year Loan Rates:	60% of market rate	40% of market rate	20% of market rate	0%
Grant/Forgivable Principal Eligibility:	Not eligible	50% (up to \$5 million)	75% (up to \$5 million)	100% (up to \$5 million)

Hardship for wastewater and stormwater facility preconstruction projects

Wastewater and stormwater facility preconstruction projects (for example, planning and design) funded through the Revolving Fund are eligible for financial hardship consideration if the project meets the following criteria:

- The existing residential population of the service area for the proposed project is 25,000 or less at the time of application.
- The MHI for the proposed service area is less than 80 percent of the state MHI.

Ecology may award applicants who meet these criteria a forgivable principal loan for 50 percent of the eligible project costs.

Hardship for onsite sewage system projects

Hardship funding is available for onsite sewage system projects in the form of grants and subsidized loans. Ecology determines the final blended subsidized interest rate for the subsidized Revolving Fund loan based on the loans provided to homeowners and small commercial enterprises during the project. Ecology will award no more than \$500,000 in grant to cover all eligible costs, including hardship, for an onsite sewage system project.

The following are requirements in order for project activities to qualify for a subsidized loan interest rate based on hardship:

- Household income not to exceed 80 percent of county MHI.
- Small commercial enterprise annual revenue not to exceed \$100,000.

Green Project Reserve (GPR)

Green Project Reserve (GPR) is a category of projects or project elements that focus on green infrastructure, water or energy efficiencies, or environmentally innovative activities. Although GPR projects can be stand-alone projects, GPR is typically an element of a larger project type.

The FFY13 Capitalization Grant from EPA required Ecology to direct at least 10 percent of the Revolving Fund capitalization grant to GPR. To encourage GPR applications, Ecology can offer up to 25 percent of the GPR funding in the form of forgivable principal loans and the remaining 75 percent as standard loans. Any one project that is categorized for GPR may receive up to 50 percent of the amount available for forgivable principal. Ecology calculates the amount of

forgivable principal in this category based only on the portion of the project that meets the GPR criteria (discussed in Chapter 3). Ecology does not consider components that do not fall under GPR when calculating forgivable principal.

To calculate the ceiling amount for total Revolving Fund forgivable principal and Centennial grant funding for an application that qualifies for both wastewater facility hardship funding and green project reserve funding, Ecology combines the ceiling amount of both hardship and green project reserve categories.

Centennial

Centennial provides grants to eligible public bodies for wastewater infrastructure and nonpoint source pollution control projects. Examples of fundable nonpoint source pollution control projects include stream restoration and buffers, agricultural best management practices (BMPs), onsite sewage system repair and replacement, stormwater activities, and protection of drinking water sources. Infrastructure projects are limited to wastewater facility construction projects in qualified hardship communities. Although it is rarely done, Ecology may also make loans using funds from Centennial.

Centennial may be funded from various state sources, including the State General Fund, the State Building Construction Account, and the State and Local Toxics Account.

Ecology must manage Centennial in accordance with state laws and rules, including Chapter 70.146 RCW and Chapter 173-95A WAC.

Section 319

Congress established Section 319 as part of the CWA amendments of 1987 to address nonpoint sources of water pollution. EPA offers an annual grant to Washington to implement its plan to control nonpoint sources of pollution, *Washington's Water Quality Management Plan to Control Nonpoint Sources of Pollution*. The grant from EPA requires a 40 percent state match, and Ecology provides this match through Centennial grants for nonpoint source pollution control projects.

Section 319 provides grants for a variety of activity projects that address nonpoint sources of pollution, including watershed planning, implementation of BMPs, water quality monitoring, and outreach and education. Projects that implement BMPs are required to collect and report data to estimate load reductions of nitrogen, phosphorus, and sediments, and Ecology must report the reductions to EPA annually. Eligible applicants include public bodies in addition to not-for-profit groups that are not eligible for other water quality funding programs administered by Ecology.

There are no specific state laws or rules for Section 319, but Ecology uses federal laws, rules, and guidelines and Centennial laws and rules to steer the program.

Prior funding levels

Total funds available for the Water Quality Program have varied. The amount of funding available on a competitive basis for each SFY varies based on program policies, legislative

directives, previous commitments, and funding levels. Ecology does not know the exact amount of funding available at the time a particular funding cycle begins. The amount of funding will not be known until state and federal appropriations are made.

Table 2 below shows the level of funding for the previous four years. The extended payment grant for Spokane County/City was completed in the SFY14 funding cycle.

Table 2: Prior Funding Levels

FUNDING CATEGORY	SFY 2011	SFY 2012	SFY 2013	SFY 2014
Total Funds Available	\$108.5M	\$111.6M	\$88M	\$152M
Total Centennial (state funds)	\$15M	\$21.1M	\$13.5M	\$25M
Spokane County/City Extended Payment Grant	\$5.0M	\$5.0M	\$5.0M	\$10M
Legislative Provisos	---	\$8.1M	---	---
Competitive Centennial:	\$10M	\$8.0M	\$8.5M	\$5M
Hardship Facilities	\$6M	\$5.3M	\$5.7M	\$5M
Nonpoint Activities	\$2M	\$2.7M	\$2.8M	\$5M
Stormwater	\$1M	---	---	---
Onsite Sewage System	\$1M	---	---	---
Total Revolving Fund (federal/state funds)	\$87.4M	\$88.5M	\$72.5M	\$125M
Spokane County Previous Commitment Loan	\$16.2M	---	---	---
Competitive Revolving Fund:	\$71.2M	\$88.5M	\$72.5M	\$125M
Preconstruction Loans	---	---	\$3.5M	\$6.1M
Facility Loans	\$40M	\$70M	\$51.5M	\$92M
Nonpoint Activity Loans	\$10M	\$11M	\$14M	\$24.5M
Green Project Reserve	\$7M	\$5.1M	\$2.5M	\$2.3M
Forgivable Principal Loans	\$14.2M	\$2.3M	\$1.4-\$2M	\$1.1-\$1.6M
Total Section 319 Nonpoint Activity Grants (federal funds)	\$1.8M	\$2.0M	\$1.6M	\$1.6M

Grant match requirements

All nonpoint source activity grants have matching requirements. The grant share for nonpoint source activity projects funded through Centennial or Section 319 is 75 percent of the total eligible costs.

Onsite sewage system repair and replacement grants have a 50 percent match requirement; the match is usually fulfilled by the accompanying Revolving Fund loan.

Centennial grants awarded for wastewater hardship do not have a match requirement. *The following discussion does not apply to projects awarded a grant for hardship.*

Match is often in the form of cash, but a recipient may match some grants with interlocal contributions or other in-kind contributions. The type of match depends on the type of grant or the amount of the grant. Projects awarded a grant of \$250,000 or less may have any combination of cash, interlocal, or other in-kind match. Projects awarded a grant more than \$250,000 up to the maximum amount of \$500,000 must meet the match requirement with cash only.

Cash match

Cash match includes any eligible project costs paid for directly by the recipient that are not reimbursed by the Ecology grant or another third party. Donations that become the long-term property of the recipient are considered cash match.

Grants used to match grants

Recipients should check with the funding agency issuing the grant to ensure that it can be used as match for an Ecology grant. The following applies when using other grants to match an Ecology grant:

- The scope of work on the matching grant must directly satisfy the portion of the scope of work on the Ecology grant where the work is contributed.
- The date that the costs for the matching grant are incurred must fall within the effective and expiration dates of the Ecology grant.
- The costs incurred under the matching grant must be eligible according to all criteria for the Ecology grant.
- Generally, the matching grant cannot originate from the same funding source as the Ecology grant.
- Water Quality Program grants cannot be used to match each other.
- Grants provided by the Washington State Conservation Commission cannot be used to match Water Quality Program grants.
- Funds, goods, or services cannot be used as match more than once.

Ecology uses nonpoint source activities projects funded by Centennial to meet EPA's Section 319 match requirements. The grant agreement will state if Ecology is using the project as Section 319 match Projects designated for Section 319 match cannot be used to meet match requirements for other funding programs.

Loans used to match grants

A recipient may use Centennial or Revolving Fund loans to match Centennial and Section 319 grants.

Interlocal contributions

Interlocal contributions are those made by another government through an interlocal agreement and not reimbursed by the grant or other outside funding source. The interlocal agreement should detail the work to be accomplished, the goods and services to be provided, and their value. Interlocal contributions can satisfy a cash match requirement. Interlocal contributions differ from other in-kind contributions because the following are eligible costs:

- An indirect rate of up to 25 percent of salaries and benefits.
- Cost of transportation through mileage (at the current state rate) or an indirect rate.
- Per Diem, travel, and subsistence expenses at state travel rates.
- Prevailing wages of the public body.

Other in-kind

Other in-kind match contributions are property, goods, or services contributed to the recipient (or any contractor under the agreement) without direct monetary compensation. Other in-kind match includes donated or loaned real or personal property, volunteer services, and employee services donated to a project. Other in-kind match does not include eligible project costs paid directly by the recipient (see Cash Match above). Other in-kind contributions must be fully documented and reported separately when requesting reimbursement.

The current in-kind rate for volunteer services includes the value of travel expenses contributed by volunteers. For adults, the rate is \$15.00 per hour. For persons under the age of 18, the rate is the Washington State minimum wage at the time the service is provided.

The following are examples of **ineligible** other in-kind contributions:

- Contributions of overhead costs, per-diem, travel, and subsistence expenses.
- Contributed time from individuals receiving compensation through the grant, except when those individuals are off duty and contributing on their own time.
- Time spent at advisory groups or meetings that do not directly contribute to project activities.
- Studies conducted by other state or federal agencies.

Third-party in-kind contribution

When a third-party employer (not the recipient, state agency, or a contractor under the agreement) contributes the services of an employee, in the employee's normal line of work, to the project at no charge to the recipient, the services may be valued at the employee's regular rate of pay.

Small Towns Environment Program (STEP)

In-kind contributions may be used for an Ecology-designated STEP project.

Refinancing existing debt

Revolving Fund loans are available for refinancing of existing debt. Refinancing can take the form of interim refinance and standard refinance.

Interim refinance

Interim refinancing is available for projects that are in progress and using non-Ecology funds. Any project that is eligible for a Revolving Fund loan is eligible for interim refinance.

Applicants for interim refinancing apply for funding in the same manner as any new project. Ecology rates and ranks applications for interim refinance along with all other applications for new projects. Ecology awards funding on a competitive basis for all applications (including interim refinance application) based on project ranking, project category, funding program eligibility, and funding availability.

Applicants need to clearly state in the project description that the project is underway. Applicants should also note that the loan request is to retire an existing debt and to fund all or part of the rest of the project. As with any other project, an applicant must meet all applicable requirements for that project type.

Standard refinance

Standard refinance is for projects that have been successfully completed using non-Ecology funding sources where the recipient wants to refinance at a lower interest rate. Standard refinance is limited to water pollution control facilities where project construction began after March 7, 1985. Applicants must meet all applicable requirements for the project and must meet all Ecology prerequisites at the time the project was undertaken. Hardship assistance is not available for standard refinance projects.

Standard refinance projects are a low priority, and Ecology does not rate and rank them as competitive projects. Ecology makes funding offers for standard refinance projects only if Revolving Fund money is left after funding of competitively ranked projects. Ecology ranks multiple standard refinance projects competing for funding according to financial burden on the ratepayers.

Applicants must explain the original source of project funding (e.g., internal funds, other agencies, bond issuance). Applicants must also explain the specific provisions for repayment. The debt for the project must still be outstanding, and bonds must be callable. Ecology will not advance refund a prior debt.

Chapter 3: Eligible Project Types

Some projects are eligible for both loans and grants, while other projects are eligible for only loans. Eligible projects fall into four main categories: wastewater facilities, nonpoint source activity, onsite sewage, and stormwater. In addition to these four categories, GPR is a designation that can be applied to an entire project or a component of a project.

For more information regarding the eligibility of specific projects or project components, see the tables in [Appendix C](#) and [Appendix D](#) or contact Ecology's financial management staff.

Wastewater facility projects

Water pollution control facilities projects can include planning, design, and construction of wastewater infrastructure, including treatment, collection, combined sewer overflow (CSO) abatement, and infiltration and inflow (I/I) correction. The technical prerequisites and approval process for facilities projects can be extensive. Ecology encourages applicants to work closely with the Ecology project engineers to ensure that all technical prerequisites are in place when planning facilities projects.

Planning

Costs of preparing planning documents, including General Sewer Plans, Engineering Reports, environmental review, value engineering studies, and rate studies are eligible for Water Quality Program funding. Applicants must comply with planning requirements in order to be eligible for financial assistance from Ecology.

Subsequent project steps often require Ecology approval of a planning document. Plans approved by Ecology more than two years prior to the close of a loan and grant application period must have had a recent review by Ecology to ensure that the document reflects current conditions.

Water reclamation facilities

Water reclamation facilities are eligible for loans. Water reclamation facilities must meet the same eligibility standards as other water pollution control facilities, including demonstrating that the project is the cost effective solution to a water quality problem. Cost effectiveness can include the environmental benefits of advanced wastewater treatment as well as the provision of additional water supplies.

Generally, project components with water quality benefits are eligible. Components with strictly water supply benefits are not eligible. Eligible project elements may include, but are not limited to:

- Wastewater treatment plant facilities.
- Rapid infiltration basins.
- Dedicated irrigation systems necessary to support the use of the water, such as poplar plantations.

- Purchase of land when that purchase is necessary for water storage or is the cost effective option, such as a dedicated land application site.
- Distribution piping and appurtenances needed to transport reclaimed water to the reuse site.

The purchase of land and distribution systems for recreation facilities (e.g., golf courses, ball fields, and parks) and similar community development features not directly related to water and wastewater infrastructure needs are not eligible for financial assistance.

Design

Facility design is eligible for funding. Design plans and specifications must be consistent with:

- Chapter 173-240 WAC, *Submission of Plans and Reports for Construction of Wastewater Facilities*; see <http://apps.leg.wa.gov/wac/default.aspx?cite=173-240>.
- An approved planning document.
- Conditions resulting from the State Environmental Review Planning (SERP) process or federal cross cutter consultation.
- Ecology's *Criteria for Sewage Works Design* (the "Orange Book"); see: <https://fortress.wa.gov/ecy/publications/publications/9837.pdf>.
- Other applicable requirements.

Applicants must base the plans and specifications on the preferred cost-effective alternative identified in the cost effectiveness analysis.

Construction

Facility construction is eligible for loans and hardship assistance in the form of grants, forgivable principal loans, and reduced interest rate loans. Facility construction must comply with the federal requirements of the Revolving Fund program, including Equal Employment Opportunity, Davis-Bacon wages, and Disadvantaged Business Enterprise requirements.

Recipients of grants and loans for facility construction must ensure that the project complies with the approved Plans and Specifications. To this end, the applicant must provide adequate and competent construction management and inspection. This may involve procuring professional engineering services.

Design and construction

Applicants can also apply for a combined design and construction project. The total project cost for both phases of a "Design and Construct" project must be less than \$5 million to be eligible to apply under one application. All the applicable requirements for both design and construction projects apply, including the possibility of hardship assistance for the construction elements and preconstruction funding for the design portion of the project.

Requests for additional funding

Subject to available funding, Ecology may provide additional funds to a facility project to cover additional costs or address unforeseen circumstances. Requests for additional funding for construction bid overruns and change orders are subject to the following limitations.

Construction bid overruns

Ecology may adjust a recipient's facility construction loan or grant agreement by amendment to be consistent with the low, responsive, responsible bid. If the low, responsive, responsible bid exceeds the engineer's estimate of construction costs, Ecology may approve a funding increase for up to 10 percent of the engineer's cost estimate. If funding is available for bid overruns, hardship communities will be given first priority based on the severity of financial need of the community. Ecology will fund bid overruns for non-hardship recipients on a first-come, first-served basis.

If the low, responsive, responsible bid falls below the existing loan or grant agreement amount, Ecology will amend the agreement to match the actual eligible bid amount based on the percentage of Ecology's participation in the overall funding of the project. Ecology will begin the amendment process as soon as possible after the completion of the bid process in order to make any surplus funds available to other public bodies.

Construction change orders

A change order is a formal document that modifies some condition(s) of the original construction contract. Ecology reviews all construction change orders for funding eligibility and approves or disapproves them. Significant changes that reflect a deviation from the approved planning document require pre-approval. Variations typically include changes in scope of work, contract price, construction methods, times to complete the work, and major design or process changes (such as changes in location, size, or capacity). Ecology may require a final quantity adjustment at the end of each contract to reconcile the originally contracted quantities with the quantities actually used.

Ecology may provide a five-percent contingency for change orders subject to available funding. The five-percent contingency will be based on the actual low, responsive, responsible bid. The five-percent contingency can be included in the grant or loan agreement. Change orders are not eligible for design-build or design-build-operate projects. If funding is available for change orders, hardship communities will be given first priority based on the severity of financial need of the community. Ecology will provide a contingency for change orders to non-hardship recipients on a first-come, first-served basis.

Nonpoint source activity projects

Nonpoint source water pollution control activities include a wide variety of projects that do not involve constructing or preparing to construct a traditional water pollution control facility. These types of projects involve activities such as installing best management practices (BMPs) and using outreach and education to help improve water quality by addressing nonpoint source

pollution. Ecology may require specific review and approval for certain BMPs in the individual loan or grant agreements.

All proposed nonpoint source activity projects must implement an element of a state or local plan directed at addressing water quality issues (e.g., watershed management plan, nonpoint source pollution control plan, TMDL). The plan being implemented must meet the criteria of the nine Key Elements for nonpoint source projects as outlined in EPA's *Handbook for Developing Watershed Plans to Restore and Protect Our Waters* (chapter 2, page 2-15); see: www.epa.gov/nps/watershed_handbook/.

All funded Ecology nonpoint source activity projects must also meet the objectives of *Washington's Water Quality Management Plan to Control Nonpoint Sources of Pollution (Vol. 3)*; see: <https://fortress.wa.gov/ecy/publications/publications/0510027.pdf>.

Water quality projects located in the Puget Sound basin must be consistent with the Puget Sound Partnership's *Puget Sound Action Agenda*. Projects in the Puget Sound basin that address specific actions outlined in the *Puget Sound Action Agenda* may get preference over projects in the Puget Sound basin that do not; see: www.psp.wa.gov/action_agenda_2012-13.php.

Following is an overview of project types that qualify as nonpoint source activity projects.

Best management practices (BMPs) implementation projects

Water quality best management practices (BMPs) are defined as structural or non-structural method(s), recommended through a planning process that have a demonstrated success for addressing or preventing water quality degradation. Implementation of BMPs refers to the use of established approaches or practices to address water quality problems. BMPs are physical, structural, and managerial practices that prevent or reduce nonpoint source pollution.

Ecology may fund BMPs that address or correct water quality degradation through facility- or activity-focused projects. However, BMP eligibility is not the same for loans and grants.

[Appendix D](#) contains a list of eligible BMPs and applicable funding sources.

BMP funding eligibility

BMPs for water quality improvements on private property, public property, public easements, or public rights-of-way through private property are eligible for grant and loan funding. BMPs eligible for grants are limited to livestock exclusion fencing, riparian buffer establishment and planting, riparian restoration activities, direct seeding, and certain livestock feeding practices.

Implementation of agricultural BMPs on property owned by Washington State and federal governments are largely ineligible, regardless of the eligibility of the applicant. However, Ecology may provide financial assistance to an eligible public body to participate with other state and federal agencies in comprehensive watershed planning and large scale monitoring programs that extend substantially beyond federal and state lands.

The costs associated with project-specific planning and technical assistance for planning, design, and implementation of grant and loan eligible water quality BMPs are reimbursable. General

planning for resource and land management is an eligible activity if the resulting plan includes eligible water quality BMPs consistent with the criteria required under these guidelines. Any general plan for riparian buffer protections must include recommendations that meet or exceed the new buffer width guidance found in [Appendix L](#).

As an incentive to implement the new riparian buffer requirements, Ecology will provide 100 percent grant funding for the buffer implementation project task in applications that rate and rank highest in the evaluation process. This 100 percent funding will include site-specific planning, design, and implementation of riparian buffer planting projects and associated livestock exclusion fencing only. All other BMPs will be reimbursed at the 75 percent grant share with a 25 percent match required on the project level. This will be a one-time incentive for State Fiscal Year 2015 funded projects, and may only be continued in future funding years as decided by Ecology.

All BMPs must meet the conditions of these funding guidelines and be approved by Ecology prior to installation. Recipients will be required to submit a form that describes the implementation plan for all BMPs to the regional Project Manager. The Project Manager will review the proposed project and provide written approval to proceed with implementation. If the recipient installs unapproved BMPs, the recipient assumes the risk that part or all of the reimbursement for that activity may be delayed or ineligible.

Landowner Agreements

The recipient must obtain a conservation easement or a landowner agreement signed by the landowner prior to planning and installing a BMP on private property. The recipient must submit a copy of the agreement or easement to the Ecology Project Manager. The landowner agreement will include, but not be limited to:

- A 10-year maintenance agreement that is transferred with the ownership of the land. Agreements shall not contain provisions for termination of the agreement at any time.
- Allowance of inspection of the project area by the recipient and by Ecology staff as determined by the agreement.
- A written and signed maintenance plan that covers establishment and maintenance of the BMP(s) for the first three years. This plan will detail responsibilities for both the landowner and the recipient and must include details concerning, but not limited to, watering plants, maintaining a reasonable level of plant survivability, replacing dead plants, controlling noxious weeds, and repairing and maintaining exclusion fencing, off-stream watering provisions, or other eligible BMPs. This three-year maintenance plan is generally the responsibility of the recipient unless otherwise written in the landowner agreement.
- Commitment from the landowner and producer to implement a full three-year crop rotation for agreements related to direct seed practices.
- When projects include off-stream watering installation, agreements must include provisions to ensure that water supplied is for livestock use only.
 - Per Ecology Water Resources Program Policy 1025, watering facilities provided must serve no greater number of livestock than historically range that parcel of property.

The quantity of water consumed by livestock as a result of the funded off-site watering facility should not exceed the quantity consumed if the stock were to drink directly from the stream.

- If land use is changed from livestock management to residential, commercial, or industrial development during the 10-year landowner/recipient agreement period, all financial assistance issued for the off-stream watering facilities must be immediately repaid by the loan or grant recipient to Ecology.

Agricultural best management practices

Direct seed systems

Direct seed systems are eligible for Water Quality Program financial assistance. Direct seed systems plant and fertilize row crops into undisturbed soil and eliminate full width tillage for seedbed preparation. Equipment used for direct seeding disturbs only a narrow strip of soil and retains a majority of residue from the previous crop. Direct seed systems significantly reduce erosion, improve soil quality, reduce fuel consumption, and are a viable alternative to traditional, full tillage systems. Direct seeding practices are eligible for three types of funding:

- Equipment rental cost reimbursement.
- Cost of custom application fee reimbursement.
- Direct seed equipment purchase.

[Appendix I](#) contains the eligibility conditions for direct seed systems.

Livestock exclusion fencing

Livestock exclusion fencing is eligible for Water Quality Program financial assistance when installed at a minimum setback from the ordinary high watermark consistent with the riparian restoration guidance found in [Appendix L](#). Exclusion fencing protects riparian areas from impacts due to livestock activities in and around streams. Recipients are required to plant the buffer established by the fencing setback with native trees and shrubs to provide a higher level of water quality improvement. This minimum setback and vegetation helps protect surface waters from pollutants such as pathogens, sediment, and nutrients, and provides physical protection so riparian areas may be restored. Grass filter strips are not sufficient to meet this requirement.

Livestock off-stream watering facilities

If an applicant proposes to install livestock exclusion fencing as part of a riparian protection/restoration project and the fencing meets the minimum standards for that BMP, Ecology may award grant dollars to install an off-stream watering facility. A livestock owner uses off-stream watering to provide an alternative source of watering where fencing or other method(s) exclude livestock from streams in order to protect water quality. Off-stream watering facilities (including well construction) are conditionally eligible for Water Quality Program financial assistance for projects that include privately owned livestock operations.

[Appendix J](#) contains the complete eligibility conditions for off-stream watering facilities.

Livestock feeding BMPs

Livestock feeding BMPs are intended to support the relocation of livestock activities that threaten water quality, or to enhance existing feeding areas distanced from surface waters. Recipients may install a combination of these BMPs when appropriate. Funding for livestock feeding BMPs only applies to projects that will improve existing water quality problems, and may not be used to rebuild feeding facilities where the primary purpose is to repair existing structures. Ecology's Project Management Team must approve all projects before installation. Livestock exclusion fencing is a required pre-requisite for these practices and must meet the minimum setback requirement. Eligible livestock BMPs include heavy use area protection, waste storage facilities, and windbreaks.

[Appendix K](#) contains the complete eligibility conditions for livestock feeding BMPs.

Demonstration BMP projects

Ecology will consider demonstration BMP activity projects for funding if they meet the following two conditions.

- The practice has a proven record to improve the water quality problem of concern.
- The practice has not previously been demonstrated in the Ecology region where the project is proposed.

Demonstration projects should be relatively small in scope, yet large enough to clearly evaluate BMP effectiveness. Demonstration projects also need to incorporate education and outreach, including direct involvement from the local county cooperative extension office or local conservation district. The applicant should plan outreach efforts that include news articles, focus sheets, or other written materials to maximize public exposure and increase the public awareness of the project. The applicant should describe approaches for planned outreach in the application.

Ecology expects recipients with demonstration projects to include a thorough analysis of the effectiveness and outcomes of the project in the final report and provide recommendations for the potential of the BMP to become a grant-eligible activity.

Groundwater/aquifer/wellhead planning and implementation

Planning for and implementation of wellhead protection projects, groundwater protection projects, source water (including groundwater and surface water) protection, and critical aquifer recharge area projects are eligible for loan or grant funding. Applicants undertake these projects to protect the quality of water used as a public drinking water supply. Decommissioning of abandoned wells and land acquisition for groundwater protection are not eligible for funding.

Drinking water system data are available at

www.doh.wa.gov/DataandStatisticalReports/EnvironmentalHealth/DrinkingWaterSystemData.aspx.

Lake restoration planning and implementation

Lake restoration planning and implementation projects on lakes with public access are eligible for loan or grant funding. Lake restoration implementation projects where there is no public access are not eligible for funding. The “Step Process” is required for all lake restoration projects (see Application Requirements below for a description of the Step Process). Step 1 is planning; it involves the identification of problems and evaluation of cost-effective alternatives. Step 2 is the implementation of the planning document. If the project includes construction, a design element may be included before the implementation step.

In-lake treatments, such as alum, are only eligible for Revolving Fund loans.

Public outreach and education projects

Projects with public outreach and education components are eligible for loan or grant funding. Public outreach and education use effective methods and programs, guided by a detailed outreach strategy, to engage the public's interest in improving water quality. Applicants should consider that the public has different levels of background knowledge of both water quality management and its role in reducing water pollution. Therefore, applicants should consider a multi-pronged approach to outreach. Public outreach efforts should include:

- Generating basic awareness of water pollution.
- Educating at a more sophisticated level using more comprehensive content.
- Building on existing recognition of the issue to prompt behavior changes that reduce pollution or opportunities for pollution.

The strategy should also specifically address combining public outreach with the implementation of other water quality management measures. This aspect of outreach could involve more in-depth education, short training courses, live presentations and slideshows, handbooks, posters with educational content and captioned illustrations, and web-based training modules, or websites with photos of good and bad practices.

Applicants should target their outreach and education efforts to landowners with properties adjacent to surface waters. Ecology acknowledges it is important to educate the general public about behaviors and impacts to water quality. However, for grant project purposes, the most benefit is gained by targeting landowners with properties adjacent to surface waters.

[Appendix H](#) provides guidance on how to develop outreach and education project proposals. Ecology provides this information as a resource or checklist and does not require the applicant to follow it. The goal of the checklist is to help design effective projects that change behaviors and achieves environmental results.

Riparian/wetland restoration planning and implementation

Planning and implementing riparian and wetland habitat restoration projects are eligible for loan or grant funding. Land acquisition for prevention of water pollution or wetland habitat preservation is eligible for loans only. Applicants can include installation of livestock exclusion

fencing as part of a riparian protection/restoration project. The Step Process is not required for riparian and wetland projects, but Ecology strongly encourages it.

Ecology's *Restoring Wetlands in Washington: A Guidebook for Wetland Restoration, Planning & Implementation* provides guidance in developing a project proposal; see: <https://fortress.wa.gov/ecy/publications/publications/93017.pdf>.

[Appendix L](#) contains requirements for riparian restoration and planting projects.

Total Maximum Daily Loads (TMDL) support projects

Projects that support the planning and implementation of TMDL programs are eligible for grant and loan funding. The BMPs recommended for TMDL implementation are subject to the same eligibility criteria as projects that are not part of a TMDL implementation plan.

Applicants should work directly with Ecology's TMDL coordinators in their region on planning for and managing these projects; see: www.ecy.wa.gov/programs/wq/tmdl/contacts.html.

Water quality monitoring

Water quality monitoring before and during implementation, and after project completion is critical for tracking environmental and project results. Ecology may provide loan or grant funding for water quality monitoring projects. Typically, a recipient undertakes monitoring to characterize the existing conditions of ground waters and surface waters, to identify or quantify pollutant sources or loads, or to establish the effectiveness of BMPs. Monitoring may be the entire project or a component of a larger project.

Water quality sampling for Deoxyribonucleic Acid (DNA)-typing is not an eligible activity.

Quality Assurance Project Plan (QAPP)

Prior to initiating water quality monitoring activities, the applicant must prepare a Quality Assurance Project Plan (QAPP). The QAPP must follow Ecology's *Guidelines and Specifications for Preparing Quality Assurance Project Plans for Environmental Studies*; see: <https://fortress.wa.gov/ecy/publications/publications/0403030.pdf>. A QAPP template is available at www.ecy.wa.gov/programs/eap/qa/docs/QAPPtool/index.html.

Standard Operating Procedures (SOPs) for field sampling and testing activities associated with monitoring QAPP development can be found at www.ecy.wa.gov/programs/eap/quality.html.

Applicants may also reference Ecology's *Technical Guidance for Assessing the Quality of Aquatic Environments* in developing the QAPP; see: <https://fortress.wa.gov/ecy/publications/publications/9178.pdf>.

The QAPP must:

- Describe in detail the monitoring and data quality objectives, procedures, and methodologies that will be used to ensure that all environmental data generated will meet the QAPP requirements.

- Describe in detail the water quality monitoring approach and laboratory protocols, including types of data and samples to be collected, sample location, sampling frequency, sampling procedures, analytical methods, quality control procedures, and data handling protocols.
- Describe data assessment procedures.
- Explain how the project will yield sufficient information to achieve the purpose and intent of monitoring.
- Discuss data accuracy and statistical requirements.

The recipient must submit the QAPP to Ecology’s Project Manager for review, comment, and approval before starting the environmental monitoring activities. Any monitoring activity conducted before the QAPP receives final approval is not eligible for reimbursement.

Use of an Ecology accredited laboratory

The recipient must use an environmental laboratory accredited by Ecology to analyze water samples for all parameters that require bench testing. Information on currently accredited laboratories and the accreditation process is provided on the Ecology’s Environmental Assessment Program’s website at www.ecy.wa.gov/programs/eap/labs/search.html.

The recipient should manage all monitoring data collected or acquired under the agreement to be available to secondary users and meet the “10-year rule.” The 10-year rule means that data documentation is sufficient to allow an individual not directly familiar with the specific monitoring effort to understand the purpose of the data set, methods used, results obtained, and quality assurance measures taken 10 years after data are collected.

Monitoring data management and submittal

Recipients that collect environmental monitoring data must submit all data to Ecology using the Environmental Information Management System (EIM). Data must be loaded into EIM following instructions on the EIM website at www.ecy.wa.gov/eim and be approved by Ecology’s Project Manager. Final payment requests will be withheld until data has been approved in EIM.

The data submittal portion of the EIM website provides information and help on formats and requirements for submitting tabular data. Specific questions about data submittal may be directed to the EIM Data Coordinator.

Recipients are required to follow Ecology data standards when Geographic Information System (GIS) data are collected and processed as documented at www.ecy.wa.gov/services/gis/data/standards/standards.htm. Recipients must submit copies of all final GIS data layers, imagery, related tables, raw data collection files, map products, metadata, and project documentation to Ecology.

Watershed planning and implementation

Watershed planning projects are eligible for loan or grant funding. If the project is located in the 12 counties that border Puget Sound, it must comply with planning criteria contained in Title 400 WAC, *Puget Sound Partnership*; see: <http://apps.leg.wa.gov/WAC/default.aspx?cite=400>. Ecology provides guidance for other jurisdictions.

All watershed plans must comply with the State Environmental Policy Act (SEPA) and must be submitted to Ecology for review and approval. Watershed-wide planning projects funded by Section 319 must also meet the nine Key Elements for Watershed Plans in EPA's *Handbook for Developing Watershed Plans to Restore and Protect Our Waters*; see: www.epa.gov/nps/watershed_handbook/.

Onsite sewage system projects

Onsite sewage system (OSS) projects are grant and loan eligible. Funded projects have included planning, design, and construction of community large onsite sewage systems (LOSS), surveys of existing OSS throughout watersheds, local government loan programs provided to homeowners and small commercial enterprises for the repair and replacement of failing OSS, and homeowner education and outreach on the topic of OSS operation and maintenance.

Grants for up to \$500,000 may be awarded with a 50 percent cash match. Match may be either a State Revolving Fund loan or the recipient's own source of funds.

Recipients may use Centennial grants and Revolving Fund loans for the following:

- Subsidized loans to property owners with financial hardship.
- Project administration and management.
- A loan loss reserve account in accordance with the following:
 - The grant recipient can establish and accumulate a reserve account using Centennial funds and local sources to secure the potential loss from default on individual homeowner OSS repair or replacement local loans.
 - Up to 10 percent of the total eligible cost for an individual OSS repair and replacement project may be deposited from the Centennial grant into the reserve account.
 - Recipients must apply the amount of Centennial funds on deposit in the reserve account to either:
 - Cover, in part or in full, losses realized by the grant recipient on homeowner default.
 - Additional OSS repair or replacement local loans at the timing discretion of the grant recipient.

Large onsite sewage systems (LOSS)

The Department of Health permits LOSS designed to treat less than 100,000 gallons per day through Chapter 246-272B WAC, *Large On-site Sewage System Regulations*; see: <http://apps.leg.wa.gov/WAC/default.aspx?cite=246-272B&full=true>. With the exception that

planning and design documents are approved through the Department of Health, these systems are considered facilities, and all the rules and requirements for facility projects apply. For example, LOSS projects are eligible for hardship subsidy, and State Environmental Review Process (SERP) environmental review is required.

Planning and survey

Onsite sewage system pollution identification and survey projects may be conducted throughout a watershed. Funded projects have included identification of sewage systems along the marine water shoreline and fresh water drainage shoreline. In addition to identification of fecal coliform hotspots within the waterbody, recipients may use grant or loan dollars to conduct door-to-door surveys for sewer infrastructure evaluation. Other project components eligible for funding include: Homeowner Septic Self-Inspection Trainings or Septics 101 classes.

Local loan program

Ecology may provide loans and grants to local governments to establish and manage OSS repair or replacement local loan programs. Onsite sewage system funding programs through local governments provide low-interest loan options to homeowners and small commercial enterprises for OSS repair or replacement. Local governments that have OSS funding programs in place have ensured improvement to water quality, protection of public health, and assisted in the protection and restoration of critical commercial and recreational shellfish habitat through the reduction of fecal coliform bacteria and nutrient levels in surface waters.

Grant dollars may be used to implement, market, and manage an OSS local loan program, assist financially challenged homeowners with OSS repairs or replacements, and to establish a loan-loss reserve account.

Revolving Fund loan interest rates may be adjusted to a lower rate at the end of the project based on the recipient's assistance to financially challenged homeowners. Ecology adjusts the interest rate on the local loan program based on the income of loan recipients in comparison to the county Median Household Income (MHI).

Side sewer repair or replacement is eligible for loans through the Centennial program or the Revolving Fund program under certain circumstances, including the following:

- 1) If there is an existing side-sewer lateral, an easement is needed for loan participation in the onsite sewage system abandonment and connection to the available sewer trunk line.
- 2) If there is no existing side-sewer lateral, the property owner must provide documentation of septic system abandonment and connection to the available sewer trunk line. The documentation must include:
 - a) The OSS failure.
 - b) Poor soil conditions that will not support a rehabilitated system.

A local government can tailor the OSS financial assistance program to fit into its existing water quality management strategies and efforts. Local governments may use an outside administrator for complete program management or provide some or all aspects of the loan program using internal resources. Local governments with successful local loan programs use a variety of

internal and external resources for marketing and implementing the OSS loan program, application review, loan authorization and processing, and establishment and collection of homeowner installment payments.

Aspects of a successful program include one or more of the following:

- Establishment of a program framework that addresses the identification and/or assessment of the failing OSS, homeowner loan application processing and management, and an on-going operation and maintenance program for repaired septic systems.
- Establishment of environmental and credit worthiness criteria.
- Staffing for program oversight.
- Marketing and promotion of the program through the local health jurisdiction, Septics 101 workshops, and local septic designers, installers, and pumpers.
- Septic surveys to identify OSS failures.

Before signing a loan agreement, the Water Quality Program must review and approve:

- The priority system used by a local government to identify and fund projects with the most critical water quality and public health problems.
- The local government's dedicated source of revenue to repay the loan to Ecology.
- Procedures to ensure that the citizens repay their loans to the local governments.
- Procedures to ensure adequate inspection of the project by the local government during implementation.
- Assurances that citizens receiving local loan funds will properly operate and maintain the systems that are constructed.

The following guidelines must be used when local governments consider providing loans from local loan funds to small commercial enterprises for OSS rehabilitation or replacement:

- No more than one-third of the local loan fund may be used by small commercial enterprises for onsite wastewater treatment corrections.
- No more one-sixth of the local fund may be loaned to any single individual or business, up to a maximum of \$50,000.
- The average daily flows for any small commercial enterprise cannot exceed 3,500 gallons per day.

Small commercial enterprises may include public lodging (e.g., motels, hotels, and bed and breakfast establishments), rentals (e.g., apartments, duplexes, or houses), small restaurants, stores, or taverns.

Stormwater projects

Ecology may provide loans or grants to eligible applicants for stormwater-related projects. Activities required by NPDES (National Pollutant Discharge Elimination System) permits are loan eligible only. Eligible local governments may apply for financial hardship consideration for a stormwater-related project.

Funded stormwater facilities and BMPs must meet standards outlined in the Western and Eastern Washington Stormwater Management Manuals (see Resources below).

Projects located in the Puget Sound basin must comply with the Puget Sound Action Agenda; see: www.psp.wa.gov/action_agenda_2012-13.php.

Following is a list of grant and loan eligible activities:

- Land use/stormwater management planning.
- Reviewing existing local stormwater regulations.
- Conducting inventories and mapping of stormwater sources.

The following list identifies project components that are eligible for loan only:

- Establishment of stormwater utilities.
- Source control activities.
- Implementation of Low Impact Development techniques.
- Stormwater retrofit planning, design, and construction.
- Stormwater pollution control facility planning, design, and construction.

Resources include:

- *Green Infrastructure Approaches to Managing Wet Weather with State Revolving Funds*; see: www.epa.gov/owm/cwfinance/cwsrf/green_if.pdf.
- *Low Impact Development Technical Guidance Manual for Puget Sound*; see: www.psparchives.com/publications/our_work/stormwater/lid/LID_manual2005.pdf and www.psp.wa.gov/LID_manual.php.
- Western and Eastern Washington Stormwater Management Manuals; see: www.ecy.wa.gov/programs/wq/stormwater/tech.html.

Green Project Reserve (GPR)

To qualify for GPR consideration, projects or project components must meet the general categorical definition of GPR as identified in EPA guidelines. EPA guidelines can be found in [Appendix E](#).

Green infrastructure

Green stormwater infrastructure includes a wide array of practices at multiple scales that manage wet weather and maintain and restore natural hydrology by infiltrating, evapotranspiring, harvesting, and using stormwater. On a regional scale, green infrastructure is the preservation and restoration of natural landscape features, such as forests, floodplains, and wetlands, coupled with policies such as infill and redevelopment that reduce overall imperviousness in a watershed. On the local scale, green infrastructure consists of site- and neighborhood-specific practices, such as bioretention, trees, green roofs, permeable pavements, and cisterns.

Water efficiency improvements

EPA's Water Sense Program defines water efficiency improvement as the use of improved technologies and practices to deliver equal or better services with less water. This encompasses conservation and reuse efforts, as well as water loss reduction and prevention, to protect water resources for the future. Water efficiency improvement projects include reduction of water usage, water conservation, or water reuse.

Energy efficiency improvements

Energy efficiency improvement is the use of improved technologies and practices to reduce the energy consumption of water quality infrastructure projects, use energy in a more efficient way, or produce or use renewable energy.

Environmentally innovative activities

Environmentally innovative projects include those that demonstrate new or innovative approaches to delivering services or managing water resources in a more sustainable way.

Ineligible projects

In general, projects or project elements that do not have a direct water quality benefit are not eligible for funding. Projects or project elements prohibited by statute, federal appropriation, or administrative rules are also ineligible. A list of ineligible projects and project elements for the Revolving Fund, Section 319, and Centennial programs can be found in Appendices C, D, J, K, and L of this document and also in the Revolving Fund and Centennial statutes. For consistency, Ecology has chosen to apply the same eligibility rules to Section 319 funds.

This page purposely left blank

Chapter 4: How to Apply for Funding

Note. Ecology is developing a new web-based grant and loan management system called Ecology Administration of Grants and Loans (EAGL). EAGL will be used to manage grants and loans from the point of application all the way through final close-out. The SFY15 Water Quality Combined Funding Cycle application will be available through the EAGL on-line system starting October 1st. Due to the EAGL project's timeline, the opening of the application period was moved from September to October for this year. Applicants will have from October 1st thru December 4th to submit their applications.

Ecology manages the three major funding programs for water quality projects as one program. We have one combined funding cycle, one application process, and one Final Offer List and Intended Use Plan.

The funding cycle

The SFY15 application cycle begins on October 1, 2013. Before the application period opens, Ecology posts information explaining the application process and sends out a notice about the application period and corresponding application workshops. Ecology holds application workshops in October at four locations around the state – one in each Ecology region.

During the funding cycle, Ecology:

- Accepts applications from October 1, 2013, to December 4, 2013.
- Rates and ranks the eligible applications based on the evaluation criteria.
- Solicits advice on project scope of work from other state agencies, if applicable.
- Conducts an evaluators' meeting to: discuss the project proposals, water quality priorities, finalize evaluations, and develop a Draft Offer List and Intended Use Plan (Draft List).
- Sends the Draft List to the Governor's Office of Financial Management and the State Legislature for consideration during the funding appropriation process.
- Opens a 30-day public review and comment period.
- Makes adjustments to the Draft List based on legislative provisions.
- Conducts a public meeting during the 30-day public review process to present the Draft List.
- Publishes the Final Offer List and Intended Use Plan (Final List) that includes a responsiveness summary to comments received on the Draft List.
- Develops project agreements by the end of January of the year following the publication date of the Final List.
- Closes-out projects within five years of the publication date of the Final List.

Figure 1 illustrates the estimated timeline for the funding cycle steps for SFY15.

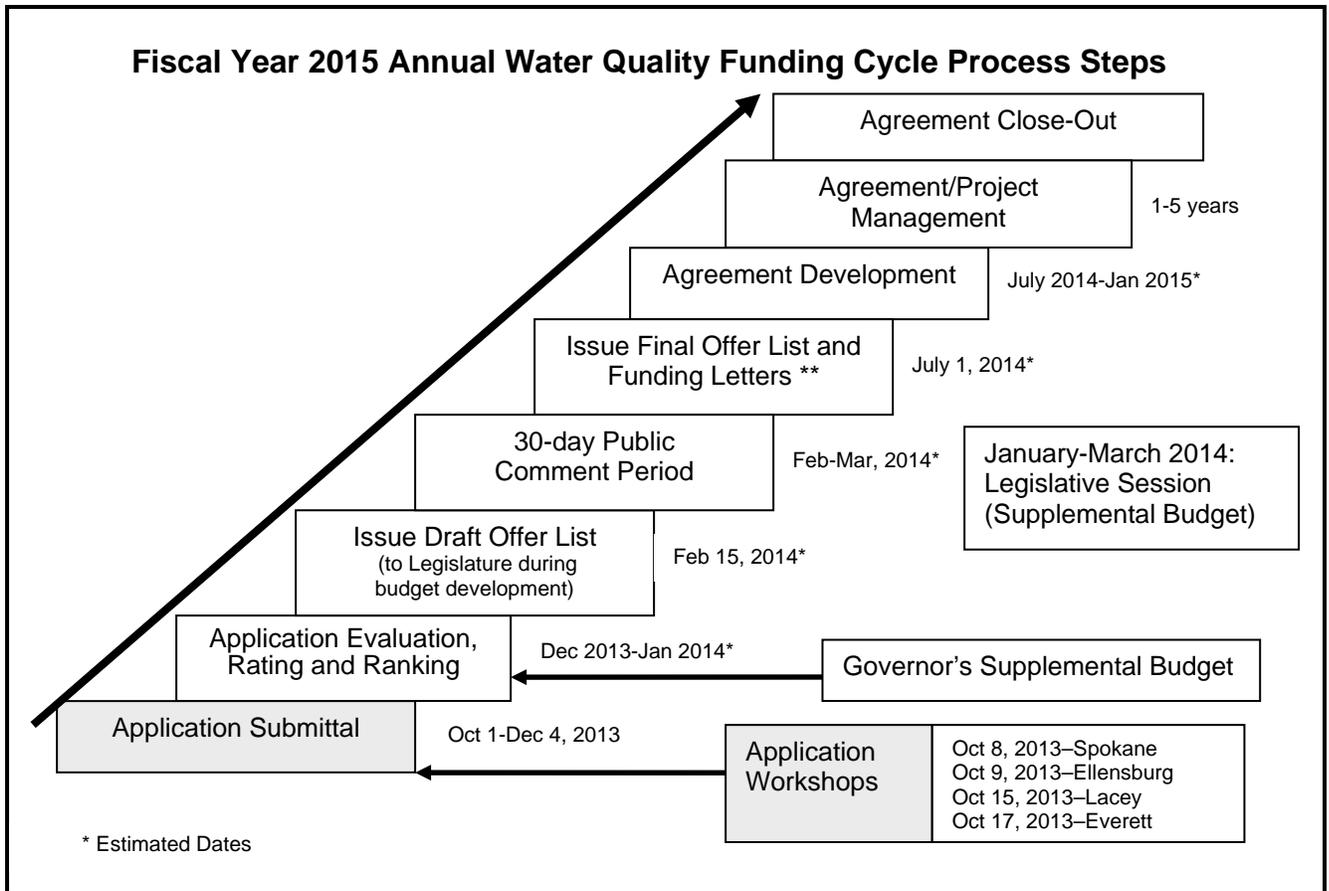

Figure 1: The Funding Cycle

How to apply

The application

The EAGL funding application is available by going to www.ecy.wa.gov/programs/wq/funding/cycles/FY2015/index.html and clicking on the link to EAGL. Applicants can access the funding application from the EAGL webpage. An EAGL Users Manual is available on the EAGL webpage as well; it provides instructions on accessing and using the system.

Applications can be submitted beginning on October 1, 2013. All applications must be submitted by 5:00pm on December 4, 2013.

Evaluation process

Ecology evaluates project proposals based on responses provided on eight forms of the application. A total of 1,000 points are available. In order to obtain funding a project must receive a score of at least 600 total points, and it must receive at least 125 of the 250 possible points on the Water Quality and Public Health Improvements Form. Table 3 shows the scoring breakdown by form and the scoring criteria. Additional guidance on scoring is in [Appendix N](#).

Table 3: Application Rating and Ranking Criteria

Form and Scoring	Points
Scope of Work Form (up to 250 points) <ul style="list-style-type: none"> The scope of work represents a complete and concise description of the project tasks and outcomes, including deliverables and timelines. 	0-100
<ul style="list-style-type: none"> The project directly and measurably addresses a water quality problem. 	0-150
Task Costs General Form (up to 150 points) <ul style="list-style-type: none"> The cost estimate process is reasonable. 	0-50
<ul style="list-style-type: none"> The project task costs represents a good value for the work and water quality benefits achieved. The applicant has identified adequate matching funds. 	0-100
Water Quality and Public Health Improvement Form (up to 250 points) <ul style="list-style-type: none"> How severe is the water quality problem and how well is it defined? 	0-50
<ul style="list-style-type: none"> The project will achieve substantial water quality and public health benefits. 	0-100
<ul style="list-style-type: none"> Project success can be measured, and the proposed methods to measure success are reasonable. 	0-50
<ul style="list-style-type: none"> The project will provide long-term water quality benefits. Systems are in place to sustain the benefits after funding support has ended. 	0-50
Coordination with State and Federal Priorities Form (up to 100 points) <ul style="list-style-type: none"> How well does the project address a current permit requirement or TMDL implementation? OR How well does the project address other state or federal water quality requirements? OR How well does the project address the Puget Sound Partnership Action Agenda or current approved plan or program, other than a TMDL, specifically designed to address water quality problems? AND How well does the applicant and the project address greenhouse gas emission reductions in accordance with RCW 70.235.070? 	0-100
Project Team Form (up to 50 points) <ul style="list-style-type: none"> Team members' roles and responsibilities are well defined and adequate for the Scope of Work. 	0-20
<ul style="list-style-type: none"> Team members' past experience is relevant. 	0-20
<ul style="list-style-type: none"> Staffing commitment is well documented. 	0-10
Project Development, Local Support, and Past Performance Form (up to 75 points) <ul style="list-style-type: none"> A comprehensive decision making process was used to arrive at the proposed project. 	0-20
<ul style="list-style-type: none"> Plans for long-term project success and sustainability were considered during project development. 	0-20
<ul style="list-style-type: none"> A high level of local support and commitment for the project is documented. 	0-20
<ul style="list-style-type: none"> The applicant documents successful performance on other funded water quality projects, including Ecology funded projects. 	0-15
Readiness to Proceed Form (up to 75 points) <ul style="list-style-type: none"> Project elements are in place for the project to proceed and documentation is provided. 	0-75
Financial Hardship Form (0 or 50 points) <ul style="list-style-type: none"> Does the applicant meet the criteria for financial hardship? 	0 or 50

Two Ecology staff review the project proposal; each reviewer gives the proposal a numeric score. One reviewer is from the Ecology region where the project is located, and the second reviewer is from one of the other regions. Ecology staff compares the two scores to ensure evaluation consistency for the application. If needed, a third Ecology reviewer performs an evaluation to ensure accurate, consistent scoring. Ecology develops a ranked list of projects based on the project scores.

Ecology may request input from other state agencies about certain types of projects. This outside review may not generate a numerical score, but it can influence the score. Outside reviewers could include staff from the State Conservation Commission, Puget Sound Partnership, or the State Department of Health.

The information provided in the application is the basis for the scope of work used in a funding agreement. If the applicant makes significant changes to the scope of work after the application deadline, Ecology may withdraw a funding offer.

The successful project proposal

Demand for water quality program funding has routinely outstripped available funding. With such a competitive funding environment, applicants must develop a strong project application to display the project in the best light. While there is no guarantee that a project proposal will be funded, applicants can do several things to improve their chances of success.

In general, a successful project proposal will:

Show how the project solves or addresses a water quality problem.

- Identify a documented water quality issue.
- Demonstrate a clear connection between the proposed project and how it will help resolve the identified water quality issue.
- Explain how the applicant will document the water quality benefit.

Explain why the applicant chose the project.

- Describe the process the applicant used to select the project over other solutions.
- Provide documentation of plan(s) that supports the project.
- Explain why the project is the applicant's highest priority.

Demonstrate that the project is well thought out.

- Include a well-defined scope of work that has goals, objectives, timelines, and measurable outcomes.
- Show how the project enjoys broad support by the community and agency partners.

Show that funds will be well spent.

- Provide an accurate and reasonable budget.
- Show that the funding request is reasonable compared to the proposed water quality benefit.

Illustrate that the project is ready to go.

- Confirm that the applicant has completed all required environmental review.
- Document that the applicant has obtained or applied for all permits.
- Verify that the applicant has completed all necessary easements, property owner agreements, or land acquisition.

Be easy to read and understand.

- Make sure that your application addresses all of the items identified in the evaluation criteria and scoring guide.
- Give clear, concise answers to all questions.
- Write in complete sentences.

Helpful hints:

- Include maps, diagrams, and pictures of the project and project area and display past projects (if any exist).
- Provide documentation to support answers.
- Include applicable letter(s) of support.
- Include citations.

Application requirements

Applicants with facilities projects need to complete certain prerequisites in order to be eligible for funding assistance. All applicants will be evaluated on how they are implementing the State's requirements for Greenhouse Gas Emissions reductions. Applicants in the Puget Sound basin must be consistent with the Puget Sound Partnership's Action Agenda.

The Step Process

Applicants that propose facilities projects must proceed according to a systematic method known as the Step Process. Funding for one Step does not guarantee funding for subsequent Steps. The Step Process consists of three steps.

- Step 1 (planning) involves preparing a site-specific facilities plan that identifies the cost-effective alternatives for addressing a water pollution control problem.
- Step 2 (design) involves preparing plans and specifications for use in construction.
- Step 3 (construction) is the actual building of the facilities based on the approved design.

Ecology must approve the Step 1 planning document before an applicant can apply for Step 2 funding. Ecology must also approve the Step 2 plans and specifications before the applicant can apply for Step 3 funding. The applicant must provide a copy of Ecology's signed approval letter with their application.

Stormwater projects, irrigation efficiency projects, and other types of projects that are not required to prepare a General Sewer Plan or Engineering Report may substitute a pre-design report for Step 1 of the process.

Design and construction (Steps 2 and 3) can be combined into one application in certain cases; these projects are called Step 4 projects. To qualify for Step 4, the project must be \$5 million or less, and the applicant must be able to demonstrate that they can complete the design and have it approved within one year of the funding agreement.

Ecology encourages applicants to follow the Step Process for activities projects; however, it is not required and may not be applicable in every case. Lake restoration and planning activities on lakes with public access are eligible for loan or grant funding. The Step Process is required for nonpoint source activity lake restoration projects.

Project Analysis Form for stormwater projects

A Project Analysis Form is required in order to be eligible for funding for stormwater facility construction projects. The form gives Ecology an opportunity to review and comment on the technical merits and cost effectiveness of the project, ensuring that funds are offered to high quality projects.

GMA compliance

To be eligible for grant and loan funding, applicants with facilities projects in jurisdictions that are required to plan under the Growth Management Act (GMA) must be in compliance with the GMA. For Ecology's purposes, applicants must comply with the requirements for comprehensive planning and development regulations.

For special districts (such as sewer districts or public utility districts), the county, city, or town in which the facility is located, must be in compliance with the GMA requirements for comprehensive planning and development regulations.

Any public body required to comply with the GMA must certify its compliance with the applicable GMA requirements at the time a loan or grant agreement is signed, unless exceptional situations exist. The public body certifies its compliance by signing the loan agreement. Ecology may make exceptions in situations involving a public health need or a significant environmental degradation.

GMA compliance impacts the program in several ways:

- 1) GMA compliance status may have an impact on the priority evaluation of proposed facilities projects, because facilities projects in areas out of compliance with the GMA may not be ready to proceed.
- 2) Ecology coordinates with the Washington State Department of Commerce to help ensure the applicants are in compliance when the financial assistance agreement is signed. Loan and grant offers are effective for seven months from the publish date of the Final List. If an applicant achieves GMA compliance during that time period, Ecology may sign the agreement.
- 3) Ecology exceptions do not relieve applicants of their responsibilities to comply with the GMA requirements. However, under certain circumstances Ecology will make temporary exceptions to the GMA compliance requirement if the proposed project is required to address a "serious public health need" or a "significant environmental degradation."

Ecology looks at such designations very carefully and makes determinations on a case-by-case basis.

GMA compliance does not affect activity project applications, such as watershed planning, water quality monitoring, public information and education, etc. GMA compliance also does not affect facilities projects proposed by public bodies not planning under the GMA.

Environmental review

More detailed environmental review guidance is available online at <http://www.ecy.wa.gov/programs/wq/funding/GrantLoanMgmtDocs/Eng/GrantLoanMgmtEngRes.html>.

Environmental review applies to wastewater and stormwater facility projects. However, all watershed plans must comply with the State Environmental Policy Act (SEPA) and must be submitted to Ecology for review and approval.

State environmental review process for Revolving Fund projects

Any applicant with a facility design (Step 2), construction (Step 3), or combined design and construction (Step 4) project must complete the State Environmental Review Process (SERP) prior to applying for Revolving Fund financing. This requirement applies to wastewater, stormwater (construction projects only), reclaimed water, combined sewer, on-site septic repair and replacements, and large onsite sewage systems projects.

Any facility planning (Step 1) project using Revolving Fund financing must include SERP review as part of the scope of work in the loan agreement.

Ecology will work with applicants who have on-site septic repair and replacement projects to ensure that SERP requirements are met prior to the start of the project.

The review completed under the State Environmental Policy Act (SEPA) is Washington State's environmental review process. A basic overview of SEPA is available at www.ecy.wa.gov/programs/sea/sepa/e-review.html. SEPA applies to decisions made by every state and local agency, including state agencies, counties, cities, ports, and special districts. The SEPA lead agency is responsible for identifying and evaluating the potential adverse environmental impacts of a proposal. This evaluation is documented and sent to other agencies and the public for review and comment. Every facility construction project is subject to SEPA review regardless of how the project is financed.

SEPA provides a framework for considering the environmental consequences of a project and provides a familiar, well-understood method for citizens to provide their input. However, SEPA alone does not meet all the federal requirements that projects using Revolving Fund financing must meet. Several elements must be added:

- 1) Completed SEPA review process documentation.
- 2) Cost effectiveness analysis.

- 3) Public participation including a public meeting, the name of the publication where the public comment and public meeting information was published, date of the publication, dates comments, all comments (oral and written), and how the comments were addressed.
- 4) Review and concurrence by Ecology.

If a federal agency (e.g., Rural Development or EPA) has completed a National Environmental Policy Act (NEPA) review of the project, that review can be used to satisfy SERP requirements. Applicants who have completed the NEPA process should also adopt the federal environmental review documents according to Part 6 of SEPA rules.

Federal environmental cross cutter requirements

Applicants for wastewater construction (Step 3) projects must complete federal cross cutter review and concurrence before the Water Quality Program Manager signs the Revolving Fund loan agreement. Combined design and construction (Step 4) projects must meet these requirements before starting construction activities. Any construction activities that occur prior to Ecology's cross cutter concurrence will not be eligible for reimbursement. Federal cross cutter review is a requirement for wastewater treatment, wastewater collection, reclaimed water, infiltration and inflow correction, and combined sewer projects.

Many cross cutters affect how a project is implemented, bid, or managed. These requirements are detailed in the loan agreement and are implemented in the construction contract by including the Ecology specification inserts into the bid package.

Loan applicants/recipients will prepare a cross cutter report that documents their actions in regard to each federal cross cutter. When complete, the applicant/recipient will submit the report to the regional Project Manager for review.

The following is a list and brief description of the federal cross cutters required for Revolving Fund facility construction projects.

- The Clean Air Act establishes air quality standards. This cross cutter applies to projects located in nonattainment areas (areas out of compliance with the standards) or maintenance areas (areas that have come back into compliance). Compliance may require estimating the air pollution emissions associated with the project.
- The Coastal Zone Management Act (CZMA) protects the nation's coastal areas. This cross cutter applies to any project located in a county adjacent to Puget Sound, the Pacific Ocean, or the Lower Columbia River Estuary. Compliance requires receiving CZMA concurrence from Ecology.
- The Endangered Species Act identifies and protects species at risk of extinction. This cross cutter may apply if the project is located near any endangered species or their critical habitat. Because so many of Washington's rivers are habitat for endangered salmonid species, this cross cutter applies to many water quality projects. Compliance may require receiving formal concurrence after consultation with the US Fish and Wildlife Service and the National Marine Fisheries Service.

- The Farmland Protection Policy Act protects the nation’s productive farmland. This cross cutter may apply if the project converts farmland to another purpose. Compliance may require consultation with the US Soil Conservation Service.
- Floodplain Management Executive Orders are a series of presidential executive orders that protect floodplain function and protect federally funded projects from flood damage. This cross cutter may apply if the project is located in the 100-year floodplain. Compliance may require consultation with the Federal Emergency Management Agency.
- Environmental Justice seeks to protect minority, low-income and tribal communities that may experience disproportionate environmental or human health impacts caused by project activity.
- The National Historic Preservation Act protects archeological and cultural resources and historic structures. This cross cutter may apply if the project modifies a building older than 50 years old, or if the project involves any amount of excavation.
- The Safe Drinking Water Act protects sole source drinking water aquifers. This cross cutter may apply if the project is located on a sole source aquifer. Compliance may require consultation with the US Environmental Protection Agency.
- The Sustainable Fisheries Act protects habitat for commercially valuable fish species. This cross cutter may apply if the project is located near essential fish habitat. Compliance may require consultation with the National Marine Fisheries Service.
- Wetland Protection Executive Orders protect the nation’s wetlands. This cross cutter may apply if the project is located near any wetlands. Compliance may require consultation with the US Fish and Wildlife Service.
- The Wild and Scenic Rivers Act protects the free flowing character of designated rivers. This cross cutter may apply if the project is located in the river basin of a wild and scenic river. Compliance may require consultation with the US Forest Service.

Historic and cultural resources requirements

Many proposed projects have the potential to significantly impact culturally or historically significant locations or artifacts. Ecology staff coordinates with the Department of Archaeology and Historic Preservation (DAHP) to meet all state or federal requirements regarding cultural and historic preservation.

All projects that disturb soils from their natural state or impact buildings 50 years or older must comply with the applicable state or federal laws. Staff from Ecology’s Water Quality Program work with grant and loan recipients to follow the appropriate steps to work with the DAHP and tribes to determine if a site has the potential of disturbing or significantly impacting cultural or historic resources. All activities associated with site assessments for cultural and historic resources are grant and loan eligible.

[Appendix M](#) provides more information regarding cultural resources review requirements and the process.

Puget Sound Action Agenda

The Puget Sound Partnership is a Washington State agency created by the State Legislature and charged to create an Action Agenda that leads to a healthy Puget Sound. The Puget Sound Partnership Action Agenda prioritizes cleanup and improvement projects; coordinates federal, state, local, tribal, and private resources; and makes sure that they are all working cooperatively.

Water quality projects located in the Puget Sound basin must not be in conflict with the Puget Sound Partnership Action Agenda. The Puget Sound basin is defined as WRIAs 1 through 19 (see [Appendix F](#) for a map of WRIAs in Washington State).

Projects in the Puget Sound basin that address specific actions outlined in the Puget Sound Partnership Action Agenda will receive preference over projects in the Puget Sound basin that do not; see: www.psp.wa.gov/action_agenda_2012-13.php.

Greenhouse gas emission reductions

In 2009, the State Legislature passed ESSB 5560 adding new policies related to green house gas (GHG) emissions to state funding for infrastructure. These policies are codified in RCW 70.235.070 (*Distribution of funds for infrastructure and capital development projects – Prerequisites*); see: <http://apps.leg.wa.gov/rcw/default.aspx?cite=70.235.070>

Requirements of RCW 70.235.070 must be included in the Revolving Fund and Centennial programs as a factor for consideration as part of the competitive selection process. The integration of GHG consideration should be a factor that influences project selection, but should not overwhelm the underlying goals of the funding programs. Ecology's funding application includes questions related to applicant and project consistency with GHG emissions reduction goals, including asking the applicant to describe how it is meeting requirements of RCW 70.235.070.

Measures *the applicant* can take to reduce GHG emissions include:

- Enacting goals and policies committing to GHG emissions reduction targets.
- Adopting energy efficiency policies to reduce consumption in buildings and infrastructure.
- Adopting policies that promote and support the generation and use of alternative energy.
- Adopting waste reduction and diversion policies such as methane recovery or waste-to-energy programs.
- Adopting policies to replace or repower existing vehicles with cleaner, more efficient vehicles.
- Adopting equipment procurement policies that result in reduced consumption of fossil fuels.
- Implementing commute trip reduction plans and policies that establish reduction goals and strategies to reduce annual per capita vehicle miles travelled by the entity's community or workforce.
- Adopting policies that preserve forest, agricultural, and open space lands.

- Adopting comprehensive land use plans or planning policies that promote and support development patterns that encourage compact and transit-friendly communities and protect natural resources lands from conversion.

Examples of how *the project* can be designed or built to reduce GHG emissions include:

- The project site reduces GHG emissions by being located in:
 - Existing developed areas (e.g., high-density areas, urban growth areas, or designated urban centers) where services exist or are planned.
 - Areas where transportation options can be efficiently provided.
 - Areas where conversion of natural resources and rural land is prevented.
 - Areas that promote transportation choices such as transit, bicycle, and pedestrian accessibility.
 - Brownfield redevelopment areas.
 - Other areas that encourage the use of non-single occupancy vehicles and minimize the amount of land to be devoted to the project.
- Methods used to develop, construct, and operate the project reduce the use of fossil fuels (GHG emissions) by:
 - Using high performance sustainable building design, such as the use of green building standards.
 - Using green materials and high-energy efficiency measures.
 - Promoting the use of recycled content materials for building construction.
 - Supporting environmental/ecological footprint improvements (e.g., energy efficiency, water conservation, habitat preservation, green alternatives, waste-to-energy, and lowering surface disturbance).
 - Implementing new technologies, practices, and equipment to lower energy use for operation.
 - Using renewable energy (wind, geothermal, solar, etc.), distributed energy (solar photovoltaic panels), or purchased green power.

Rate studies and fee ordinances

Ecology requires all applicants that receive Revolving Fund loan offers for facility construction have a rate study and an adopted fee ordinance. The rate study must include the proposed facility. The fee ordinance must be based on the rate study and be adequate to fund all annual financial obligations for the entity, including operation and maintenance costs, repair and replacement costs, and annual debt service including required reserve accounts.

Interim refinance

All applicants for interim refinance must comply with Davis-Bacon Act wage requirements for the entire project from the initial date of construction, including portions of the project that are not being funded by Ecology.

Public review and request for reconsideration

Applicants and the public receive notices from Ecology about the 30-day public comment period on the Draft List. During the 30-day public comment period, applicants may provide comment on the process or request reconsideration of a project proposal.

Official comments on the list and process or requests for reconsideration must be submitted to Ecology in writing within the 30-day comment period. Any request for reconsideration must be well defined and supported.

Ecology will provide a response to written comments in the Final List. Ecology publishes these documents following the final approval of the State's budget that provides appropriation authority for funding.

Chapter 5: Grant and Loan Agreement Development and Management

Note. As stated above in Chapter 4, Ecology is in the process of implementing a web-based grant and loan management system (EAGL). Many of the funding agreement development and management processes described in this chapter will be handled within the new system for SFY15 and future funding agreements.

The loan and grant agreement development process

Ecology makes formal funding offers at the time of the publication of the Final Offer List and Intended Use Plan (Final List).

Project Management Team

Ecology assigns a Project Management Team to each project receiving a funding offer. The Project Management Team consists of a Financial Manager from the headquarters office and a Project Manager from the regional office where the project is located. Ecology's Project Management Team contacts the applicant within four weeks of the loan or grant offer to schedule a time to discuss the funding offer and begin the process of developing a funding agreement. The Project Management Team works to develop and negotiate funding agreements and monitor recipient performance after an agreement is signed.

The Ecology Project Management Team uses information found in the funding proposal as the basis for developing the funding agreement. Funding agreements for clearly defined project proposals that include a detailed scope of work, measurable objectives, and accurate budgets take less time to develop. If the applicant makes significant changes to the scope of work after the award, Ecology may withdraw a funding offer.

To speed development and processing, Ecology standardizes much of the funding agreement language and includes general terms and conditions and other conditions that are required by state or federal law.

Ecology assigns a regional Project Engineer for most facilities projects to provide engineering technical assistance, conduct engineering review and approvals, and determine eligibility of project components. The Project Engineer may also serve as the Project Manager.

The Financial Manager reviews and approves payment requests and assists the Project Manager in the negotiation of agreements. The Financial Manager also administers the project, determines eligibility, and maintains project files.

The Project Manager is the primary contact for technical assistance and day-to-day questions. The Project Manager also works with the Financial Manager to resolve payment or eligibility issues if they arise. When in doubt, call any member of the Project Management Team for information.

After developing the agreement, the Project Management Team requests a funding program review. The Financial Manager then sends the funding agreement to the applicant for signature. The applicant will send the funding agreement back to the Financial Manager for the final signature by the Water Quality Program Manager or the authorized designee.

The *effective date* is the earliest date on which eligible costs may be incurred. The effective date is negotiated between the applicant and Project Management Team. Once the agreement is signed by Ecology, a fully executed original will be returned to the recipient. The *applicant* becomes the *recipient* once the agreement is signed.

Incurring eligible costs

The applicant may incur project costs on and after the effective date and before Ecology's signature of the final agreement. Expenditures cannot be reimbursed until the agreement has been signed by Ecology's Water Quality Program Manager. While applicants can incur eligible costs before the agreement is signed, they do so at their own risk.

Important dates

The time limits for starting and ending projects are based on the publication date of the Final List that identifies the project for funding.

The funding agreement for the project must be signed by both parties no later than seven months after the publication date of the Final List. Generally this means January 31 of the year following the publication of the Final List.

Actual work on the project should begin no later than 10 months after the publication date of the Final List. Generally this means April 30 of the year following the publication of the Final List.

The *expiration date* (of an agreement or amendment) is the last date on which costs may be incurred and be considered eligible. The *project completion date* is the date specified in the agreement as that on which the Scope of Work will be fully completed. Both dates are negotiated between the applicant and the Project Management Team.

The *initiation of operation date* (applies to facilities construction projects) is the actual date that a facility starts operation and is used for its intended purpose. This date may occur prior to final inspection. Ecology will determine the initiation of operation date after consultation with the recipient. This date may be the same as the project completion date, or it may be earlier. The initiation of operation date triggers the start of the one-year loan repayment grace period. If the project completion date occurs before the initiation of operation date, the start of the one-year loan repayment grace period starts with the project completion date.

A Revolving Fund funded project must be completed within five years of the publication date of the Final List. After the five-year limit is reached, a time extension of no more than 12 months may be made with valid reasons supporting the time extension. In no event can the project be extended beyond six years of the publication date of the Final List identifying the project.

Activities projects funded with Section 319 grants and Centennial grants used for the Section 319 match must be completed within three years of the publication date of the Final List. After the three-year limit is reached, a time extension of no more than 12 months may be made with valid reasons supporting the time extension. In no event can the project be extended beyond four years of the publication date of the Final List identifying the project.

Investment grade efficiency audit

Recipients of funding from the Revolving Fund and Centennial with facilities projects may be required to conduct an investment grade efficiency audit (IEGA). Ecology's appropriation in the 2013-15 Biennial Budget states in part,

For projects involving repair, replacement, or improvement of a wastewater treatment plant or other public works facility for which an investment grade efficiency audit is obtainable, the department of ecology must require as a contract condition that the project sponsor undertake an investment grade efficiency audit.

The IEGA may be paid for with Centennial grant or Revolving Fund loan funds.

Preaward Compliance Review Report for all applicants requesting federal assistance

Recipients of funding from the Revolving Fund, Section 319, or Centennial projects used for the state match for Section 319 must complete and submit to Ecology a Preaward Compliance Review Report. The report can be accessed at www.epa.gov/ogd/forms/forms.htm.

Federal Funding Accountability and Transparency Act & EPA Data Reporting Sheet

Recipients of funding from the Revolving Fund, Section 319, or Centennial projects used for the state match for Section 319 must complete and submit a Data Reporting Sheet to Ecology. The information provided in the Data Reporting Sheet:

- 1) Fulfills the Federal Funding Accountability and Transparency Act (FFATA) reporting requirements.
- 2) Gathers additional information required to be reported to EPA.

See the *Report forms* section at www.ecy.wa.gov/programs/wq/funding/GrantLoanMgmtDocs/GrantLoanMgmtTools.html to access the sheets and for further information.

Specification inserts

Agreements for projects funded through Centennial or the Revolving Fund will contain several special conditions. See the *Specification Inserts* section at www.ecy.wa.gov/programs/wq/funding/GrantLoanMgmtDocs/Eng/GrantLoanMgmtEngRes.htm for the most current versions of the special conditions.

Financial capability assessment

Ecology must conduct financial capability assessments of public bodies receiving Revolving Fund loans. These assessments may require Ecology staff to review current financial statements to determine the ability of applicants to repay debt. Ecology cannot sign loan agreements without a financial capability assessment.

Ecology staff will contact applicants who received Revolving Fund loan offers soon after the publication of the Final List to request information needed to conduct a financial capability assessment.

General Revolving Fund loan elements

The following items are required conditions of recipients of a Revolving Fund loan.

Opinion of recipient's legal counsel

Recipients must provide a statement from their legal counsel regarding the final draft of the loan agreement. The statement will be included in the loan agreement. A template of the statement can be found at

www.ecy.wa.gov/programs/wq/funding/GrantLoanMgmtDocs/GrantLoanMgmtTools.html

Authorizing ordinance or resolution

Recipients must provide an authorizing ordinance or resolution that states that the recipient accepts its responsibility to repay the loan and abide by the provisions of the agreement. The resolution must be signed by the governing board or council and is included in the loan agreement as an attachment.

Insurance

Where applicable, recipients must maintain comprehensive insurance coverage on projects in amounts equal to the funds disbursed.

Interest accrual

Ecology disburses loan funds on a cost-reimbursable basis. An incurred cost is defined as a cost that has occurred and is eligible for payment. Interest begins to accrue on each disbursement at the time it is paid to the recipient.

Operation and maintenance of utility

The recipients must keep the utility in good working order and operate the utility efficiently.

Pledge of net revenue or utility local improvement district assessments

If revenue from a utility local improvement district (ULID) is used to secure a loan, the recipient must irrevocably pledge to pay the net revenue of the ULID to cover the principal and interest.

Repayments

Semi-annual loan repayment begins one year after the project completion date or initiation of operation date, whichever comes first. There is no restriction or penalty for early loan repayment.

Reserve requirement

For a loan that is a revenue-secured debt with a term greater than five years, Ecology requires the recipient to accumulate a reserve equivalent to at least the average annual debt service on the loan. The recipient must establish this reserve during the first five years of the repayment period of the loan.

Terms and interest rates

Ecology bases interest rates for non-hardship projects on the average market interest rate for tax-exempt municipal bonds as published in the Bond Buyer's Index. Rates are based on the average daily market interest rate for the period 60 to 30 days before the start of the application cycle. Rates can be found at www.economagic.com/em-cgi/data.exe/fedbog/slbond.

For a repayment period of up to five years, the rate is 30 percent of market rate for tax-exempt municipal bonds. For a repayment period of more than five years, but no more than 20 years, the rate is 60 percent of market rate for tax-exempt municipal bonds. Interest rates for hardship loans and onsite local loan funds vary.

Interest is compounded monthly.

Agreement terms and conditions

The following are important terms and conditions that play a role in the day-to-day decisions made on loan or grant projects. A complete listing of the administrative requirements for all grants and loans administered by Ecology is contained in the *Administrative Requirements for Recipients of Ecology Grants and Loans–Yellow Book*; see: <https://fortress.wa.gov/ecy/publications/publications/9118.pdf>.

Accounting standards

Recipients must maintain accounting records in accordance with RCW 43.09.200, *Local government accounting–Uniform system of accounting*; see: <http://apps.leg.wa.gov/rcw/default.aspx?cite=43.09.200>.

Advisory committee time

Time spent by advisory councils to carry out projects is an eligible cost, including costs incurred by advisory councils or committees established according to federal or state requirements.

Amendment process

Modifications and changes to the funding agreement may become necessary. The recipient must negotiate changes and document the changes as an amendment to the funding agreement. All proposed project changes are subject to approval by Ecology.

The recipient or Ecology may initiate the amendment process. If the recipient initiates the process, they must send a written request to Ecology's Project Manager. If the Project Manager concurs with the request, the Financial Manager prepares the amendment.

Ecology sends two original copies of an amendment to the recipient for signature, and the recipient returns them to Ecology. Ecology's Water Quality Program Manager or designee signs the amendment, at which time it becomes effective. Ecology sends one of the original copies of the signed amendment to the recipient contact.

Reasons for amendments could include:

- Budget increases or decreases.
- Scope of work changes.
- Changes to required performance.
- Time extensions.

Appeals process

Loan or grant recipients may formally appeal a written decision by Ecology. A recipient cannot bring a lawsuit to Superior Court unless the aggrieved party follows the procedures listed below. The procedures are intended to encourage the informal resolution of disputes.

- 1) The recipient may seek review of the financial assistance program's initial decision within 30 days of the decision. The recipient makes the request for review in writing to the Water Quality Program Manager.
- 2) The Program Manager will consider the appeal information and will issue a written decision within 30 days from the time the appeal is received.
- 3) If the recipient is not satisfied with the Program Manager's decision, the recipient has 30 days to submit a written request to Ecology's Deputy Director of Ecology for a review of the decision.
- 4) The Deputy Director will consider the appeal information and will issue a written decision within 30 days from the time the request is received. The Deputy Director's decision will be the final decision of Ecology.
- 5) If the recipient is not satisfied with the Deputy Director's final decision, the recipient may appeal to the Thurston County Superior Court, pursuant to RCW 34.05.570(4), *Judicial Review*; see: <http://apps.leg.wa.gov/rcw/default.aspx?cite=34.05.570>.
- 6) Unless all parties to such appeal agree that a different time frame is appropriate, the parties shall attempt to bring the matter for a superior court determination within four months of the date in which the administrative record is filed with the court. This time frame is to ensure minimal disruptions to the program.

Budgets

All recipients must track the project budget by task. An object-based budget is not permitted. Object budget information provided in the application is used to evaluate if all costs were considered by the applicant at the time of application and to track requested purchases during project implementation.

The budget amount for Administration cannot exceed 15 percent of the total eligible cost of the project.

Disbursements of loan and grant funds

Ecology disburses loan and grant funds to recipients on a cost-reimbursable basis. The recipient must incur eligible costs within the effective date and expiration date of the funding agreement unless interim refinancing is approved.

Education and outreach

Recipients of grant funding for education and outreach activities projects must do a regional search for existing materials before producing any new educational flyers or pamphlets and request the use of existing materials before time and resources are invested to duplicate materials that are already available. Recipients must also check the Washington Waters website at www.ecy.wa.gov/washington_waters/index.html for useful educational materials. These materials are available for public use and can be downloaded directly from the website.

Recipients must provide Ecology with a copy of any tangible educational products developed under the grant, such as brochures, manuals, pamphlets, videos, audio tapes, CDs, curriculum, posters, media announcements or gadgets, such as a refrigerator magnet with a message. If this is not practical, recipients must provide Ecology a complete description including photographs or printouts of the products.

Recipients must also provide Ecology with contact information for local project leads.

If there are a significant number of people in the community that speak languages other than English, recipients must produce all educational and public outreach materials in English and in the other most prevalent language.

Equipment purchase and equipment fees

Equipment purchases are eligible if Ecology's Project Management Team approved them in advance or they are specified in the agreement. The recipient may charge an appropriate use fee for equipment it owns.

A use fee for equipment owned by the recipient or utilized through a valid interlocal agreement:

- Must be justifiable, fair, and reasonably attributed to the project.
- Must directly satisfy the project scope of work.
- Must be shown to be cost effective.

- Cannot exceed the acquisition cost of the equipment or facilities.
- Cannot exceed the rental rate or purchase price for comparable equipment or facilities in the recipient's market.

Extensions and project completion

Ecology can authorize time extensions for valid and substantiated reasons if they occur during the three-year (activities grants) or five-year (loans) timeframe. Ecology can grant an extension of up to 12 months beyond the designated date under certain conditions, including but not limited to:

- Schedules included in water quality permits, consent decrees, or enforcement orders.
- Work that falls within an environmental window in a specific season of the year.

To ensure timely processing, the recipient must request extensions no less than three months before the funding agreement is due to expire.

Section 319 grants have limitations on contract extensions based on when the grant is awarded to the State.

Force accounts and staffing plans

Force account refers to a local government that uses its own staff to complete a facilities project. For activities projects, it may be considered a staffing plan. Force accounts and staffing plans may be eligible for funding under the Revolving Fund if:

- The recipient complies with laws on discrimination, such as wages, job safety, insurance, licenses, and certifications; see: [Chapter 39.04 RCW](#), [RCW 35.22.620](#), and [RCW 35.23.352](#).
- The recipient demonstrates that they have the legal authority and the technical capability to perform the work.
- The recipient demonstrates that other essential functions will not be affected by performing the work.
- The work is accomplished more economically than if procured competitively.
- The recipient submits a written request to fund the force account work that includes a dollar amount and a general description of the force account work. The request must be approved by the Ecology Regional Section Manager.
- The work to be performed using recipient forces is included as a separate budget line item in the financial assistance agreement.

The recipient must maintain separate and identifiable records for a force account or staffing plan to ensure eligible costs are charged to the project. Overtime differential is not allowed.

Indirect rate

The recipient can charge an indirect rate of up to 25 percent of salaries and benefits to cover overhead costs that benefit more than one activity of the recipient and that are not directly

assignable to a particular objective of the project. Recipients may be required to submit documentation at any time listing what is included in the indirect rate.

Interlocal agreements

Interlocal agreements must be consistent with the terms of the loan or grant agreement and Chapter 39.34 RCW, *Interlocal Cooperation Act*; see: <http://apps.leg.wa.gov/rcw/default.aspx?cite=39.34&full=true>.

Light refreshments

Light refreshment costs for meetings or conferences are eligible as permitted by Ecology's travel policy. They must be approved by the Project Manager.

Coffee and any other non-alcoholic beverage, such as tea, soft drinks, juice, or milk, and snacks served at meetings or conferences are considered light refreshments.

Payment holds or termination

If a recipient does not satisfy conditions in the funding agreement, Ecology may terminate the agreement and request that the recipient repay all of the funds disbursed, withhold a payment, or decrease the payment by the amount proportionate to the costs associated to the incomplete work.

Payment requests processing

Payment requests are initiated and processed through the EAGL system. Backup documentation is required for all goods and services listed in a payment request.

Permits

Recipients must secure any required permits and provide documentation upon request. Work on the permit preparation is an eligible cost. Permit fees associated with completing a funded project are also eligible. Ecology considers annual permit fees a normal operating expense, so annual permit fees are not eligible for funding.

Procuring goods and services

The recipient is responsible for procuring professional, personal, and other services using sound business judgment and good administrative procedures consistent with applicable federal, state, and local laws, orders, regulations, and permits. This includes issuance of invitation of bids, requests for proposals, selection of contractors, award of sub-agreements, and other related procurement matters.

The Office of Minority and Women Owned Business Enterprises (OMWBE) has established voluntary goals for the participation of minority- and women-owned businesses in procurements made with Ecology funds. Each loan and grant agreement will contain a condition regarding OMWBE. While participation is voluntary, Ecology requires reporting the level of participation.

Progress reports

Recipients must submit progress reports on a regular basis. Progress reports must be submitted at least quarterly and with every payment request. Progress reports are submitted through the EAGL system.

Progress reports should include a description of all progress made in the reporting period to meet goals as well as any successes, problems, and delays that affect the project. If a problem exists, recipients must discuss the corrective actions taken or proposed and identify any Ecology assistance that may be needed.

Ecology will withhold payments if the recipient has not submitted progress reports.

Project site visits and post project assessments

Ecology's Project Management Team may conduct site visits to provide technical assistance and verify progress or payment information for projects.

Recipients of grant funding for activities projects must agree to participate in a brief survey regarding the key project results or water quality project outcomes and the status of long-term environmental results or goals from the project approximately three years after project completion.

Public awareness

Recipients must inform the public about the project and about Ecology and EPA participation for the following:

- Any site-specific project that is accessible to the public must have signs acknowledging state and federal participation. Logos are available from Ecology Financial Managers for use on signs.
- All publications must include acknowledgment of state and federal participation.

Transportation costs

The recipient can recover the cost of transportation through the state mileage rate, a use fee, or an indirect rate. The recipient may charge mileage to the project at the current state mileage rate. The mileage charge includes all vehicle-related needs, such as gas, tires, insurance, and maintenance.

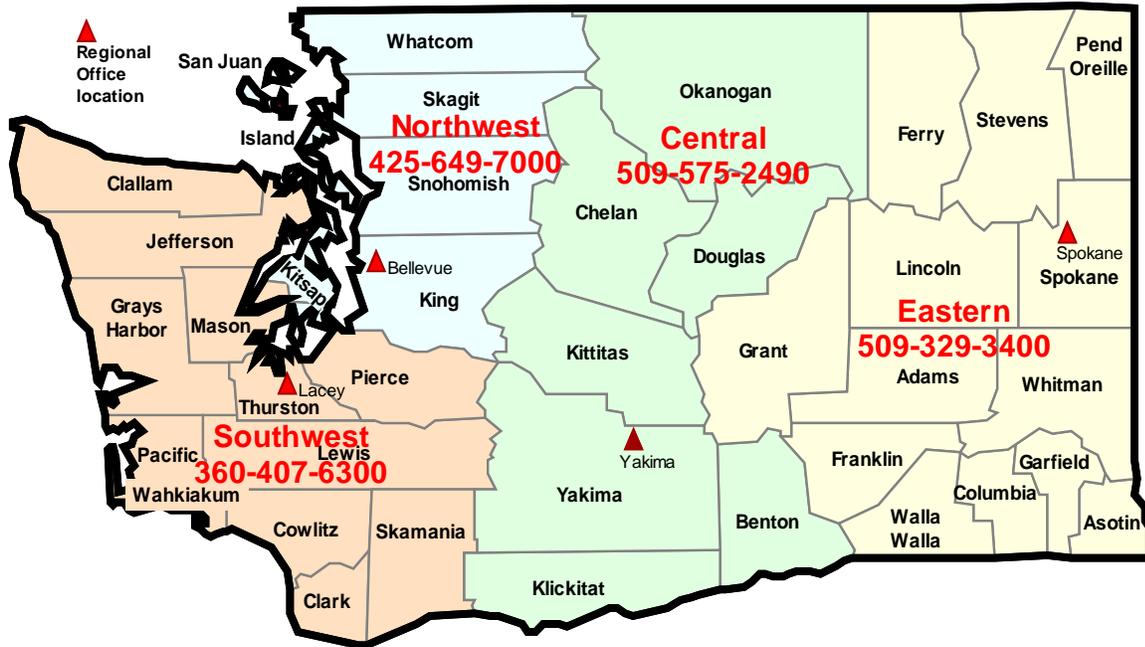

Appendix A. Acronyms and Abbreviations

Acronyms and Abbreviations	Program Name
ACS	American Community Survey
BMP	Best Management Practice
Centennial	Centennial Clean Water Fund
CDP	Census Designated Place
CSO	Combined Sewer Overflow

Appendix C. Comparison of Eligibility

Table C-1 compares the eligibility under the funding programs for various project types and components. Not all scenarios are covered. For clarification, contact Ecology staff about your proposed project. Staff contact information is found at the beginning of the guidelines on page viii.

The following abbreviations are used in the tables:

- Y.....Yes, the facility or activity is eligible.
- N.....No, the facility or activity is not eligible.
- N*.....No, the facility or activity may be eligible for hardship applicants only.
- SRF.....State Revolving Fund
- FP.....Forgivable Principal

Table C-1: Eligibility of Project Types and Components

DESCRIPTION	Centennial Grant	Centennial Loan	SRF FP Loan	SRF Loan	Section 319 Grant
WASTEWATER FACILITY					
Combined sewer overflow abatement	N*	Y	N*	Y	N
Construction administration and inspection services	N*	Y	N*	Y	N
Engineering reports including environmental review requirements	N	Y	N*	Y	N
Facilities for the control, storage, treatment, disposal, or recycling of domestic wastewater	N*	Y	N*	Y	N
Facilities located on private property	N*	Y	N*	N	N
Facilities to meet existing need	N*	Y	N*	Y	N
Facilities with reserve capacities to accommodate flows associated with 20-year projected growth	N*	N	N*	Y	N
General Sewer Plans, including project specific engineering and environmental review requirements	N	Y	N	Y	N
Planning, including feasibility studies, value engineering, and rate studies	N	Y	N	Y	N
Plans and specifications (facility design)	N	Y	N*	Y	N
Reclaimed water distribution infrastructure for transportation to reuse site.	N*	Y	N*	Y	N
Refinancing: <i>Interim</i> for any project eligible for an SRF loan or <i>Standard</i> for water pollution control facilities begun after March 7, 1985	N	N	N	Y	N
Sewer laterals, individual pump stations, other appurtenances on private residential property, where the facilities are not owned and maintained by a public body	N*	Y	N	N	N
Sewer laterals, individual pump stations, other appurtenances on private residential property, where the facilities are owned and maintained by a public body	N*	Y	N*	Y	N
Sewer laterals, individual pump stations, other appurtenances on private residential property, where the project addresses a source of nonpoint pollution	N*	Y	N*	Y	N
Sewers and side sewer laterals on public property for infiltration and inflow correction projects	N*	Y	N	Y	N

DESCRIPTION	Centennial Grant	Centennial Loan	SRF FP Loan	SRF Loan	Section 319 Grant
NONPOINT SOURCE ACTIVITY					
Agricultural BMP implementation on private property at concentrated animal feeding operations (CAFOs) (only CAFOs in areas covered by federally designated National Estuaries are eligible for SRF loans)	N	Y	N	Y	N
Agricultural BMP implementation on private property for the following: riparian re-vegetation or fence construction; livestock feeding BMPs including heavy use area protection, waste storage facilities, and windbreaks; certain activities that contribute to converting conventional tillage practices to direct seed practices; new innovative/alternative technology if they have not yet been demonstrated in the Ecology Region in which they are proposed; new BMPs approved by Ecology that are environmentally sound, effective, and consistent with the funding program goals and objectives	Y	Y	N	Y	Y
Agricultural BMP implementation on public property other than state or federal property (e.g., city, county property)	Y	Y	N	Y	Y
Agricultural BMPs on most federal and state owned property	N	N	N	N	N
Aquatic plant control when it has been established that water quality degradation is due to the presence of aquatic plants, and sources of pollution have been addressed sufficiently	Y	Y	N	Y	Y
Comprehensive planning for basin, watershed, and area-wide water quality	Y	Y	N	Y	Y
Education and stewardship programs related to water quality	Y	Y	N	Y	Y
Farm planning when it results in water quality BMP recommendations consistent with these guidelines	Y	Y	N	Y	Y
Groundwater and source water protection	Y	Y	N	Y	Y
Irrigation canal efficiency measures (such as lining or piping existing canals)	N	Y	N	Y	N
Irrigation efficiency implementation (such as drip, mist, or low delivery systems)	N	Y	N	Y	N
Lake implementation projects with facilities elements or including alum treatments	N	N	Y	N	N
Lake restoration implementation that has gone through the Step process	Y	Y	N	Y	Y
Lake water quality planning	Y	Y	N	Y	Y
NPDES permit activities	N	Y	N	Y	N
Riparian and wetlands habitat restoration and enhancement	Y	Y	N	Y	Y
Stream restoration projects for water quality purposes	Y	Y	N	Y	Y
TMDL plan development and implementation	Y	Y	N	Y	Y
Water quality monitoring	Y	Y	N	Y	Y
Wellhead protection	Y	Y	N	Y	Y
ONSITE SEWAGE SYSTEM					
Community wastewater systems	N*	Y	N	Y	N
Community wastewater systems through a local loan fund	Y	Y	N	Y	N

DESCRIPTION	Centennial Grant	Centennial Loan	SRF FP Loan	SRF Loan	Section 319 Grant
Local loan fund for onsite sewage system repair and replacement programs	Y	Y	Y	Y	N
Local loan fund other than onsite sewage system repair/replacement	N	Y	N	Y	N
Onsite sewage system education, information, and technical assistance programs	Y	Y	N	Y	Y
STORMWATER PROJECTS					
Comprehensive stormwater planning examining facilities needs (such as conveyance and treatment)	N*	Y	N	Y	N
Stormwater facility, retrofit, or low impact development projects not required by stormwater permits	N	Y	Y	Y	N
Stormwater outreach and education projects not required by stormwater permits	Y	Y	N	Y	Y
Stormwater planning projects not required by stormwater permits	Y	Y	N	Y	Y
Stormwater projects required by stormwater permits	N	Y	N	Y	N
GREEN PROJECT RESERVE					
Energy efficiency	N	N	Y	Y	N
Environmentally innovative activities	N	N	Y	Y	N
Green infrastructure	N	N	Y	Y	N
Water efficiency	N	N	Y	Y	N
INELIGIBLE PROJECTS					
Aquatic plant control for aesthetic reasons, navigational improvements, or other purposes unrelated to water quality	N	N	N	N	N
Engineering reports that do not include SERP	N	N	N	N	N
Facilities designed solely to provide primary treatment	N	N	N	N	N
Facilities or portions of facilities that are solely intended to control transport, treat, dispose or otherwise manage commercial, institutional, or industrial wastewater	N	N	N	N	N
Lake restoration implementation where there is no public access	N	N	N	N	N
Previously funded objectives	N	N	N	N	N
Projects related to acts of nature that alter the natural environment, thereby causing water quality problems	N	N	N	N	N
Projects solely for flood control	N	N	N	N	N
Reclamation of abandoned mines	N	N	N	N	N
Scientific research unrelated to a specific activity or facility	N	N	N	N	N
Solid and hazardous waste cleanup	N	N	N	N	N
State and federal agency facilities and other duties and responsibilities	N	N	N	N	N
Water supply and conveyance	N	N	N	N	N
ELIGIBLE COMPONENTS					
Computer equipment specific to a funded project	Y	Y	Y	Y	Y
Diagnostic studies to assess current water quality	Y	Y	N	Y	Y
Equipment and/or tools pre approved for a funded project	Y	Y	Y	Y	Y
Indirect rate (up to 25% of salaries and benefits)	Y	Y	Y	Y	Y
Land acquisition as an integral part of the treatment process (e.g., land application) or for prevention of	N	Y	N	Y	N

DESCRIPTION	Centennial Grant	Centennial Loan	SRF FP Loan	SRF Loan	Section 319 Grant
water pollution					
Land acquisition to site wastewater treatment plants, sewer rights-of-way and easements, and associated costs	N	Y	N	N	N
Land acquisition for wetland habitat preservation	N	Y	N	Y	N
Landscaping for erosion control directly related to a project	Y	Y	Y	Y	Y
Legal expenses associated with development of local ordinances for water quality protection	Y	Y	N	Y	Y
Legal expenses associated with use of a bond counsel in developing a loan agreement	N	Y	N	Y	N
Light refreshments for meetings if pre approved	Y	Y	Y	Y	Y
Mitigation to comply with requirements in SEPA/NEPA or other environmental review directly related to a project	Y	Y	Y	Y	Y
Model ordinances to prevent or reduce pollution from nonpoint sources development/dissemination of	Y	Y	N	Y	Y
Monitoring equipment used for water quality assessment	Y	Y	N	Y	Y
Permits required for project implementation	Y	Y	Y	Y	Y
INELIGIBLE COMPONENTS					
Annual permit fees	N	N	N	N	N
Application preparation (grant or loan)	N	N	N	N	N
Bond costs for debt issuance	N	N	N	N	N
Bonus or acceleration payments to contractors to meet contractual completion dates for construction	N	N	N	N	N
Cost-plus-a-percentage-of-cost contracts (also known as multiplier contracts), time and materials contracts, and percent-of-construction contracts	N	N	N	N	N
Culvert repair or replacement	N	N	N	N	N
Fines and penalties due to violations of or failures to comply with federal, state, or local laws	N	N	N	N	N
Landscaping for aesthetic reasons	N	N	N	N	N
Lobbying or expenses associated with lobbying	N	N	N	N	N
Monitoring equipment used by an industry for sampling and analyses of industrial discharges to municipal water pollution control facilities	N	N	N	N	N
Operating expenses of local government, such as the salaries and expenses of a mayor, city council member, city attorney, etc.	N	N	N	N	N
Operation and maintenance expenses	N	N	N	N	N
Overtime differential paid to employees of local government to complete administrative or force account work	N	N	N	N	N
Removal of existing structures or demolition of structures that are not interfering with proposed construction	N	N	N	N	N
Vehicle purchase, except where Ecology has determined that a specialized vehicle is essential to directly satisfy the project scope of work and to achieve the project water quality goals and outcomes	N	N	N	N	N

Appendix D. Nonpoint Source Activities Eligibility Matrix

Introduction

Best management practices (BMPs) are defined as, “Structural or non-structural method(s), recommended through a planning process, that have a demonstrated success for addressing or preventing water quality degradation.”

BMPs that address or correct water quality degradation through facility or activity focused projects may be funded using Ecology’s Water Quality Program financial assistance. The implementation of BMPs refers to the use of established approaches or practices to address water quality problems.

Projects such as agricultural BMPs on property owned by Washington state and federal governments are largely ineligible, regardless of the eligibility of the applicant. However, in recognition of the complexity of watersheds and the benefits of cooperative efforts, Ecology can provide financial assistance to an eligible public body to participate with other state and federal agencies in comprehensive watershed planning and large scale monitoring programs that extend substantially beyond federal and state lands.

The three major funding programs that Ecology’s Water Quality Program administers (Centennial, Section 319, and Revolving Fund) originate from federal or state funds, which are used to address water quality problems on publicly owned lands or lands with public access.

More specific BMP provisions are discussed in Appendices J, K, and L.

Eligible BMPs

Eligible BMPs include, but are not limited to, those that:

- Are recommended through a multi-agency watershed management planning process and approved by Ecology as an effective technique to reduce nonpoint source pollution.
- Are required in order to meet a National Pollution Discharge Elimination System (NPDES) permit (loans only).
- Provide public benefits through improved water quality.
- Are based on water quality improvements and not on production needs.
- Target the most critical areas and structural and non-structural practices that, if properly managed, will provide the greatest protection or improvement in water quality.

Ecology limits its financial assistance to public bodies. However, the public body that receives a grant or a loan can provide financial assistance to a private landowner.

BMPs on private property limitations

BMPs on private property are limited to those that involve the following:

- A landowner agreement or conservation easement is granted and signed by the landowner.
- Site specific project plans that have been reviewed and approved by Ecology in writing prior to implementation.
- Implementation of BMPs in the riparian zone consisting of revegetation or fence construction that meets the riparian restoration criteria in [Appendix L](#).
- Implementation of no-till BMPs in areas where sedimentation and erosion affect water quality in streams and rivers.
- Implementation of livestock feeding BMPs where:
 - Activity from livestock is contributing to fecal coliform or sedimentation problems and/or other degradation to the riparian area, stream, and water quality.
 - The installation meets all of Ecology’s prerequisites for eligibility.
- Implementation of new, innovative, or alternative technology BMPs not yet demonstrated in the Ecology region in which they are proposed. Demonstration projects are approved by Ecology on a case-by-case basis for grant eligibility.

Agricultural BMPs must comply with the Natural Resource Conservation Service (NRCS) Field Office Technical Guide (FOTG) construction specifications or equivalent construction standards. If NRCS specifications are not available, the structural design of the proposed BMP must be designed by a licensed engineer. For further information, see Section IV of the FOTG at <http://efotg.nrcs.usda.gov/treemenuFS.aspx?Fips=53077&MenuName=menuWA.zip>.

Stormwater BMPs in Western Washington must comply with the Western Washington Stormwater Management Manual (*Stormwater Management Manual for Western Washington, Washington State Department of Ecology, August 2001*, Ecology Publication Numbers 99-11; 99-12; 99-13; 99-14; 99-15). Eastern Washington projects must comply with the *Stormwater Management Manual for Eastern Washington*, Ecology Publication Number 04-10-076). The stormwater manuals can be found at www.ecy.wa.gov/programs/wq/stormwater/municipal/StrmwtrMan.html.

Stream restoration and stabilization projects must meet the standards established in [Appendix L](#) of this document and the Washington State Aquatic Guideline Program’s *Stream Habitat Restoration Guidelines*. The current version of this guidance can be found at <http://wdfw.wa.gov/publications/01374/>.

Table D-1 compares the eligibility under the funding programs for various nonpoint projects. Not all scenarios are covered. For clarification, contact Ecology staff about the proposed project. Staff contact information is found at the beginning of the guidelines on page viii.

The following abbreviations are used in the table:

- Y.....Yes, the facility or activity is eligible.
- N.....No, the facility or activity is not eligible.
- SRF.....State Revolving Fund

Table D-1: Nonpoint Source Activities Eligibility Matrix

DESCRIPTION	Centennial Grant	Centennial Loan	SRF Loan	Section 319 Grant
BEST MANAGEMENT PRACTICES (BMPs)				
BMP implementation on public property other than state or federal property (e.g., city, county property)	Y	Y	Y	Y
BMPs that affect upland areas or that are production oriented	N	N	N	N
Cultural resources review for BMP implementation	Y	Y	Y	Y
Most BMPs on federal and state owned property	N	N	N	N
EROSION AND SEDIMENT CONTROL, BANK STABILIZATION, RIPARIAN, LAKE SHORE & WETLAND RESTORATION				
Acquisition/installation of native plant material ^{b, f}	Y	Y	Y	Y
Acquisition/installation of plant material stabilizer ^{b, f}	Y	Y	Y	Y
Armoring of the toe ^{b, f}	Y	Y	Y	Y
Channel re-establishment or naturalization/meander reconstruction/ re-sloping ^{a, b}	Y	Y	Y	Y
Conservation plans (site-specific) and targeted BMP plans ^a	Y	Y	Y	Y
Grass filter strips ^{a, b, f}	Y	Y	Y	Y
Installation of log structures ^{a, b, f}	Y	Y	Y	Y
Installation of rip rap, boulders, and retaining walls	N	N	N	N
Installation of root wads ^{b, f}	Y	Y	Y	Y
Installation of siphons	N	Y	Y	N
Installation of tide or flood gates	N	Y	Y	N
Lakeshore riparian installation ^{a, b, f}	Y	Y	Y	Y
Land acquisition for wetlands protection, restoration, and construction	N	Y	Y	N
Planting trees for future harvesting	N	N	Y	N
Residue management via no till, direct seeding ^{a, b, f}	Y	Y	Y	Y
Riparian forest buffers (not for future harvest) ^{a, b, f}	Y	Y	Y	Y
Sediment control basins ^{b, f}	N	Y	Y	N
Site monitoring and follow-up maintenance ^a	Y	Y	Y	Y
Site preparation work (e.g., weed removal) ^b	Y	Y	Y	Y
Stream bank revegetation ^{a, b, f}	Y	Y	Y	Y
Use of sediment settlers (e.g., Polyacrylamide) ^{a, b}	N	Y	Y	N
Watering riparian plantings ^{b, c}	Y	Y	Y	Y
Weed control associated with riparian revegetation ^b	Y	Y	Y	Y
Wetland creation ^{a, b, f}	N	Y	Y	N
Wetlands restoration ^{a, b, f}	Y	Y	Y	Y
FARM & LIVESTOCK MANAGEMENT				
Acquisition/installation of fencing along stream ^{a, b, f}	Y	Y	Y	Y
Acquisition/installation of side/cross fencing	N	N	N	N
Bridges (livestock only) – up to 6 ft wide ^{b, e, f}	Y	Y	Y	Y
Bridges (vehicle)	N	N	N	N
Direct seed custom application fee reimbursement ^{a, b, f}	Y	Y	Y	Y
Direct seed equipment purchase by public body for rental purposes ^a	Y	Y	Y	Y
Direct seed equipment purchase for private landowner use	N	Y	Y	N
Livestock exclusion fencing on private property ^{a, b, f}	Y	Y	Y	Y

DESCRIPTION	Centennial Grant	Centennial Loan	SRF Loan	Section 319 Grant
Livestock exclusion fencing on public property ^{a, c, f}	Y	Y	Y	Y
Hardened stream crossings for livestock ^{a, b, c, e, f}	Y	Y	Y	Y
Livestock feeding BMPs including heavy use area protection, waste storage facilities, and windbreaks ^{a, b, e, f}	Y	Y	Y	Y
Off-stream watering provisions ^{a, b, c, e, f}	Y	Y	Y	Y
Reimbursement for direct seed equipment rental by private landowner ^{a, f}	Y	Y	Y	Y
Spring development ^{a, b, c, e, f}	Y	Y	Y	Y
ONSITE SEWAGE SYSTEMS				
Community systems (planning, design, and construction)	N	Y	Y	N
Onsite Sewage system repair/replacement ^a	N	Y	Y	N
Onsite Sewage system surveys	Y	Y	Y	Y
PUBLIC INFORMATION AND EDUCATION				
Education, outreach, information	Y	Y	Y	Y
Educational programs and materials not relating to water quality issues	N	N	N	N
Educational signage	Y	Y	Y	Y
Pledge programs	Y	Y	Y	Y
School programs ^{a, d}	Y	Y	Y	Y
STRUCTURAL PROTECTION OR RECONSTRUCTION				
Culvert construction, reconstruction, or replacement	N	N	N	N
Culvert removal for improved water quality and riparian restoration ^{b, f}	Y	Y	Y	Y
Well decommissioning	N	Y	Y	N
STORMWATER PROJECTS				
Detention facilities, (ponds, tanks, or vaults, et. al.)	N	Y	Y	N
Establishment of stormwater utilities not required by permit	Y	Y	Y	Y
Establishment of stormwater utilities required by permit	N	Y	Y	N
Implementation of educational activities	Y	Y	Y	Y
Individual residential stormwater infiltration treatment and collection systems, such as rain gardens or biofiltration swales on private property	N	N	N	N
Infiltration systems (dry wells, swales, trench, pond)	N	Y	Y	N
LID site-specific planning and technical assistance	Y	Y	Y	Y
Low-impact development (LID) BMPs implementation	N	Y	Y	N
Pet waste management signs	Y	Y	Y	Y
Stormwater inventories	Y	Y	Y	Y
Stormwater related land use planning not required by permit	Y	Y	Y	Y
Stormwater related land use planning required by permit	N	Y	Y	N
Stormwater treatment facilities (constructed wetlands, bioretention, etc.)	N	Y	Y	N
IRRIGATION WATER MANAGEMENT				
Irrigation water management (e.g., drip, mist, or low delivery systems)	N	Y	Y	N
Technical assistance for irrigation water management such as planning and soil testing	Y	Y	Y	Y

Footnotes:

- a. Specific criteria or guidelines apply.
- b. Work on private property requires landowner agreement.
- c. May have Ecology's Water Resources or Shorelands and Environmental Assistance Program issues. Applicants, recipients, and Ecology staff may need to inquire as to specific project limitations.
- d. School Districts are not eligible for funding.
- e. Requires exclusion fencing with a minimum setback from the ordinary high water mark consistent with the riparian restoration guidance found in [Appendix L](#). in order to be eligible.
- f. Requires prior review and approval from the Project Manager before implementation to be eligible.

This page purposely left blank

Appendix E. Green Project Reserve Guidance

Procedures for Implementing Certain Provisions of EPA's Fiscal Year 2010 Appropriation Affecting the Clean Water and Drinking Water

State Revolving Fund Programs. 4/21/2010

PART A – CWSRF GPR SPECIFIC GUIDANCE

The following sections outline the technical aspects for the CWSRF Green Project Reserve. It is organized by the four categories of green projects: green infrastructure, water efficiency, energy efficiency, and environmentally innovative activities. Categorically green projects are listed, as well as projects that are ineligible. Design criteria for business cases and example projects that would require a business case are also provided.

1.0 GREEN INFRASTRUCTURE

1.1 Definition: Green stormwater infrastructure includes a wide array of practices at multiple scales that manage wet weather and that maintain and restore natural hydrology by infiltrating, evapotranspiring and harvesting and using stormwater. On a regional scale, green infrastructure is the preservation and restoration of natural landscape features, such as forests, floodplains and wetlands, coupled with policies such as infill and redevelopment that reduce overall imperviousness in a watershed. On the local scale, green infrastructure consists of site- and neighborhood-specific practices, such as bioretention, trees, green roofs, permeable pavements, and cisterns.

1.2 Categorical Projects

1.2-1 Implementation of green streets (combinations of green infrastructure practices in transportation rights-of-ways), for either new development, redevelopment or retrofits including: permeable pavement², bioretention, trees, green roofs, and other practices such as constructed wetlands that can be designed to mimic natural hydrology and reduce effective imperviousness at one or more scales. Vector trucks and other capital equipment necessary to maintain green infrastructure projects.

1.2-2 Wet weather management systems for parking areas including: permeable pavement¹, bioretention, trees, green roofs, and other practices such as constructed wetlands that can be designed to mimic natural hydrology and reduce effective imperviousness at one or more scales. Vector trucks and other capital equipment necessary to maintain green infrastructure projects.

1.2-3 Implementation of comprehensive street tree or urban forestry programs, including expansion of tree boxes to manage additional stormwater and enhance tree health.

1.2-4 Stormwater harvesting and reuse projects, such as cisterns and the systems that allow for utilization of harvested stormwater, including pipes to distribute stormwater for reuse.

1.2-5 Downspout disconnection to remove stormwater from sanitary, combined sewers and separate storm sewers and manage runoff onsite.

¹ The total capital cost of permeable pavement is eligible, not just the incremental additional cost when compared to impervious pavement.

- 1.2-6 Comprehensive retrofit programs designed to keep wet weather discharges out of all types of sewer systems using green infrastructure technologies and approaches such as green roofs, green walls, trees and urban reforestation, permeable pavements and bioretention cells, and turf removal and replacement with native vegetation or trees that improve permeability.
- 1.2-7 Establishment or restoration of permanent riparian buffers, floodplains, wetlands and other natural features, including vegetated buffers or soft bioengineered stream banks. This includes stream day lighting that removes natural streams from artificial pipes and restores a natural stream morphology that is capable of accommodating a range of hydrologic conditions while also providing biological integrity. In highly urbanized watersheds, this may not be the original hydrology.
- 1.2-8 Projects that involve the management of wetlands to improve water quality and/or support green infrastructure efforts (e.g., flood attenuation).²
 - 1.2-8a Includes constructed wetlands.
 - 1.2-8b May include natural or restored wetlands if the wetland and its multiple functions are not degraded and all permit requirements are met.
- 1.2-9 The water quality portion of projects that employ development and redevelopment practices that preserve or restore site hydrologic processes through sustainable landscaping and site design.
- 1.2-10 Fee simple purchase of land or easements on land that has a direct benefit to water quality, such as riparian and wetland protection or restoration.
- 1.3 Projects That Do Not Meet the Definition of Green Infrastructure
 - 1.3-1 Stormwater controls that have impervious or semi-impervious liners and provide no compensatory evapotranspirative or harvesting function for stormwater retention.
 - 1.3-2 Stormwater ponds that serve an extended detention function and/or extended filtration. This includes dirt lined detention basins.
 - 1.3-3 In-line and end-of-pipe treatment systems that only filter or detain stormwater.
 - 1.3-4 Underground stormwater control and treatment devices such as swirl concentrators, hydrodynamic separators, baffle systems for grit, trash removal/floatables, oil and grease, inflatable booms and dams for in-line underground storage and diversion of flows.
 - 1.3-5 Stormwater conveyance systems that are not soil/vegetation based (swales) such as pipes and concrete channels. Green infrastructure projects that include pipes to collect stormwater may be justified as innovative environmental projects pursuant to Section 4.4 of this guidance.
 - 1.3-6 Hardening, channelizing, or straightening streams and/or stream banks.
 - 1.3-7 Street sweepers, sewer cleaners, and vactor trucks unless they support green infrastructure projects.

² Wetlands are those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, vernal pools, and similar areas.

1.4 Decision Criteria for Business Cases

- 1.4-1 Green infrastructure projects are designed to mimic the natural hydrologic conditions of the site or watershed.
- 1.4-2 Projects that capture, treat, infiltrate, or evapotranspire water on the parcels where it falls and does not result in interbasin transfers of water.
- 1.4-3 GPR project is in lieu of or to supplement municipal hard/gray infrastructure.
- 1.4-4 Projects considering both landscape and site scale will be most successful at protecting water quality.
- 1.4-5 Design criteria are available at <http://cfpub.epa.gov/npdes/greeninfrastructure/munichandbook.cfm> and <http://cfpub.epa.gov/npdes/greeninfrastructure/technology.cfm> and

1.5 Examples of Projects Requiring a Business Case

- 1.5-1 Fencing to keep livestock out of streams and stream buffers. Fencing must allow buffer vegetation to grow undisturbed and be placed a sufficient distance from the riparian edge for the buffer to function as a filter for sediment, nutrients, and other pollutants.

2.0 WATER EFFICIENCY

- 2.1 Definition: EPA's WaterSense program defines water efficiency as the use of improved technologies and practices to deliver equal or better services with less water. Water efficiency encompasses conservation and reuse efforts, as well as water loss reduction and prevention, to protect water resources for the future.

2.2 Categorical Projects

- 2.2-1 Installing or retrofitting water efficient devices, such as plumbing fixtures and appliances
 - 2.2-1a For example -- shower heads, toilets, urinals and other plumbing devices
 - 2.2-1b Where specifications exist, WaterSense labeled products should be the preferred choice (<http://www.epa.gov/watersense/index.html>).
 - 2.2-1c Implementation of incentive programs to conserve water such as rebates.
- 2.2-2 Installing any type of water meter in previously unmetered areas
 - 2.2-2a If rate structures are based on metered use
 - 2.2-2b Can include backflow prevention devices if installed in conjunction with water meter
- 2.2-3 Replacing existing broken/malfunctioning water meters, or upgrading existing meters, with:
 - 2.2-3a Automatic meter reading systems (AMR), for example:
 - 2.2-3a(i) Advanced metering infrastructure (AMI)
 - 2.2-3a(ii) Smart meters
 - 2.2-3b Meters with built in leak detection
 - 2.2-3c Can include backflow prevention devices if installed in conjunction with water meter replacement

- 2.2-4 Retrofitting/adding AMR capabilities or leak detection equipment to existing meters (not replacing the meter itself).
- 2.2-5 Water audit and water conservation plans, which are reasonably expected to result in a capital project.
- 2.2-6 Recycling and water reuse projects that replace potable sources with non-potable sources,
 - 2.2-6a Gray water, condensate and wastewater effluent reuse systems (where local codes allow the practice)
 - 2.2-6b Extra treatment costs and distribution pipes associated with water reuse.
- 2.2-7 Retrofit or replacement of existing landscape irrigation systems to more efficient landscape irrigation systems, including moisture and rain sensing controllers.
- 2.2-8 Retrofit or replacement of existing agricultural irrigation systems to more efficient agricultural irrigation systems.
- 2.3 Projects That Do Not Meet the Definition of Water Efficiency
 - 2.3-1 Agricultural flood irrigation.
 - 2.3-2 Lining of canals to reduce water loss.
 - 2.3-3 Replacing drinking water distribution lines. This activity extends beyond CWSRF eligibility and is more appropriately funded by the DWSRF.
 - 2.3-4 Leak detection equipment for drinking water distribution systems, unless used for reuse distribution pipes.
- 2.4 Decision Criteria for Business Cases
 - 2.4-1 Water efficiency can be accomplished through water saving elements or reducing water consumption. This will reduce the amount of water taken out of rivers, lakes, streams, groundwater, or from other sources.
 - 2.4-2 Water efficiency projects should deliver equal or better services with less net water use as compared to traditional or standard technologies and practices
 - 2.4-3 Efficient water use often has the added benefit of reducing the amount of energy required by a POTW, since less water would need to be collected and treated; therefore, there are also energy and financial savings.
- 2.5 Examples of Projects Requiring a Business Case.
 - 2.5-1 Water meter replacement with traditional water meters (see AWWA M6 Water Meters – Selection Installation, Testing, and Maintenance).
 - 2.5-2 Projects that result from a water audit or water conservation plan
 - 2.5-3 Storage tank replacement/rehabilitation to reduce loss of reclaimed water.
 - 2.5-4 New water efficient landscape irrigation system.
 - 2.5-5 New water efficient agricultural irrigation system.

3.0 ENERGY EFFICIENCY

- 3.1 Definition: Energy efficiency is the use of improved technologies and practices to reduce the energy consumption of water quality projects, use energy in a more efficient way, and/or produce/utilize renewable energy.

3.2 Categorical Projects

3.2-1 Renewable energy projects such as wind, solar, geothermal, micro-hydroelectric, and biogas combined heat and power systems (CHP) that provide power to a POTW. (<http://www.epa.gov/cleanenergy>). Micro-hydroelectric projects involve capturing the energy from pipe flow.

3.2-1a POTW owned renewable energy projects can be located onsite or offsite.

3.2-1b Includes the portion of a publicly owned renewable energy project that serves POTWs energy needs.

3.2-1c Must feed into the grid that the utility draws from and/or there is a direct connection.

3.2-2 Projects that achieve a 20% reduction in energy consumption are categorically eligible for GPR³. Retrofit projects should compare energy used by the existing system or unit process⁴ to the proposed project. The energy used by the existing system should be based on name plate data when the system was first installed, recognizing that the old system is currently operating at a lower overall efficiency than at the time of installation. New POTW projects or capacity expansion projects should be designed to maximize energy efficiency and should select high efficiency premium motors and equipment where cost effective. Estimation of the energy efficiency is necessary for the project to be counted toward GPR. If a project achieves less than a 20% reduction in energy efficiency, then it may be justified using a business case.

3.2-3 Collection system Infiltration/Inflow (I/I) detection equipment

3.2-4 POTW energy management planning, including energy assessments, energy audits, optimization studies, and sub-metering of individual processes to determine high energy use areas, which are reasonably expected to result in a capital project are eligible. Guidance to help POTWs develop energy management programs, including assessments and audits is available at

http://www.epa.gov/waterinfrastructure/pdfs/guidebook_si_energymanagement.pdf.

3.3 Projects That Do Not Meet the Definition of Energy Efficiency

3.3-1 Renewable energy generation that is privately owned or the portion of a publicly owned renewable energy facility that does not provide power to a POTW, either through a connection to the grid that the utility draws from and/or a direct connection to the POTW.

3.3-2 Simply replacing a pump, or other piece of equipment, because it is at the end of its useful life, with something of average efficiency.

3.3-3 Facultative lagoons, even if integral to an innovative treatment process.

3.3-4 Hydroelectric facilities, except micro-hydroelectric projects. Micro-hydroelectric projects involve capturing the energy from pipe flow.

³ The 20% threshold for categorically eligible CWSRF energy efficiency projects was derived from a 2002 Department of Energy study entitled *United States Industrial Electric Motor Systems Market Opportunities Assessment, December 2002* and adopted by the Consortium for Energy Efficiency. Further field studies conducted by Wisconsin Focus on Energy and other States programs support the threshold.

⁴ A unit process is a portion of the wastewater system such as the collection system, pumping stations, aeration system, or solids handling, etc.

3.4 Decision Criteria for Business Cases

3.4-1 Project must be cost effective. An evaluation must identify energy savings and payback on capital and operation and maintenance costs that does not exceed the useful life of the asset.

www.epa.gov/waterinfrastructure/pdfs/guidebook_si_energymangement.pdf

3.4-2 The business case must describe how the project maximizes energy saving opportunities for the POTW or unit process.

3.4-3 Using existing tools such as Energy Star's Portfolio Manager (www.energystar.gov/index.cfm?c=evaluate_performance.bus_portfoliomanage_r) or Check Up Program for Small Systems (CUPSS) (www.epa/cupss) to document current energy usage and track anticipated savings.

3.5 Examples of Projects Requiring a Business Case

3.5-1 POTW projects or unit process projects that achieve less than a 20% energy efficiency improvement.

3.5-2 Projects implementing recommendations from an energy audit that are not otherwise designated as categorical.

3.5-3 Projects that cost effectively eliminate pumps or pumping stations.

3.5-4 Infiltration/Inflow (I/I) correction projects that save energy from pumping and reduced treatment costs and are cost effective.

3.5-4a Projects that count toward GPR cannot build new structural capacity. These projects may, however, recover existing capacity by reducing flow from I/I.

3.5-5 I/I correction projects where excessive groundwater infiltration is contaminating the influent requiring otherwise unnecessary treatment processes (e.g., arsenic laden groundwater) and I/I correction is cost effective.

3.5-6 Replacing pre-Energy Policy Act of 1992 motors with National Electric Manufacturers Association (NEMA) premium energy efficiency motors.

3.5-5a NEMA is a standards setting association for the electrical manufacturing industry (www.nema.org/gov/energy/efficiency/premium/).

3.5-7 Upgrade of POTW lighting to energy efficient sources such as metal halide pulse start technologies, compact fluorescent, light emitting diode (LED).

3.5-8 SCADA systems can be justified based upon substantial energy savings.

3.5-9 Variable Frequency Drive can be justified based upon substantial energy savings.

4.0 ENVIRONMENTALLY INNOVATIVE

4.1 Definition: Environmentally innovative projects include those that demonstrate new and/or innovative approaches to delivering services or managing water resources in a more sustainable way.

4.2 Categorical Projects

4.2-1 Total/integrated water resources management planning likely to result in a capital project.

4.2-2 Utility Sustainability Plan consistent with EPA's SRF sustainability policy.

- 4.2-3 Greenhouse gas (GHG) inventory or mitigation plan and submission of a GHG inventory to a registry (such as Climate Leaders or Climate Registry)
- 4.3-3a Note: GHG Inventory and mitigation plan is eligible for CWSRF funding.
- 4.2-3b EPA Climate Leaders: www.epa.gov/climateleaders/basic/index.html Climate Registry: www.theclimateregistry.org/
- 4.2-4 Planning activities by a POTW to prepare for adaptation to the long-term effects of climate change and/or extreme weather.
- 4.2-4a Office of Water – Climate Change and Water website: www.epa.gov/water/climatechange/
- 4.2.5 Construction of US Building Council LEED certified buildings or renovation of an existing building on POTW facilities.
- 4.2-5a Any level of certification (Platinum, Gold, Silver, Certified).
- 4.2-5b All building costs are eligible, not just stormwater, water efficiency and energy efficiency related costs. Costs are not limited to the incremental additional costs associated with LEED certified buildings.
- 4.2-5c U.S. Green Building Council website www.usgbc.org/displaypage.aspx?CategoryID=19
- 4.2-6 Decentralized wastewater treatment solutions to existing deficient or failing onsite wastewater systems.
- 4.2-6a Decentralized wastewater systems include individual onsite and/or cluster wastewater systems used to collect, treat and disperse relatively small volumes of wastewater. An individual onsite wastewater treatment system is a system relying on natural processes and/or mechanical components, that is used to collect, treat and disperse or reclaim wastewater from a single dwelling or building. A cluster system is a wastewater collection and treatment system under some form of common ownership that collects wastewater from two or more dwellings or buildings and conveys it to a treatment and dispersal system located on a suitable site near the dwellings or buildings. Decentralized projects may include a combination of these systems. EPA recommends that decentralized systems be managed under a central management entity with enforceable program requirements, as stated in the EPA Voluntary Management Guidelines. www.epa.gov/owm/septic/pubs/septic_guidelines.pdf
- 4.2-6b Treatment and Collection Options: A variety of treatment and collection options are available when implementing decentralized wastewater systems. They typically include a septic tank, although many configurations include additional treatment components following or in place of the septic tank, which provide for advanced treatment solutions. Most disperse treated effluent to the soil where further treatment occurs, utilizing either conventional soil absorption fields or alternative soil dispersal methods which provide advanced treatment. Those that discharge to streams, lakes, tributaries, and other water bodies require federal or state discharge permits (see below). Some systems promote water reuse/recycling, evaporation or wastewater uptake by plants. Some decentralized systems, particularly cluster or community systems, often utilize alternative methods of collection with small

diameter pipes which can flow via gravity, pump, or siphon, including pressure sewers, vacuum sewers and small diameter gravity sewers. Alternative collection systems generally utilize piping that is less than 8 inches in diameter, or the minimum diameter allowed by the state if greater than 8 inches, with shallow burial and do not require manholes or lift stations. Septic tanks are typically installed at each building served or another location upstream of the final treatment and dispersal site. Collection systems can transport raw sewage or septic tank effluent. Another popular dispersal option used today is subsurface drip infiltration. Package plants that discharge to the soil are generally considered decentralized, depending on the situation in which they are used. While not entirely inclusive, information on treatment and collection processes is described, in detail, in the “Onsite Wastewater Treatment Technology Fact Sheets” section of the EPA Onsite Manual www.epa.gov/owm/septic/pubs/septic_2002_osdm_all.pdf and on EPA’s septic system website under Technology Fact Sheets. http://cfpub.epa.gov/owm/septic/septic.cfm?page_id=283

4.3 Projects That Do Not Meet the Definition of Environmentally Innovative

- 4.3-1 Air scrubbers to prevent nonpoint source deposition.
- 4.3-2 Facultative lagoons, even if integral to an innovative treatment processes.
- 4.3-3 Surface discharging decentralized wastewater systems where there are cost effective soil-based alternatives.
- 4.3-4 Higher sea walls to protect POTW from sea level rise.
- 4.3-5 Reflective roofs at POTW to combat heat island effect.

4.4 Decision Criteria for Business Cases

- 4.4-1 State programs are allowed flexibility in determining what projects qualify as innovative in their state based on unique geographical or climatological conditions.
 - 4.4-1a Technology or approach whose performance is expected to address water quality but the actual performance has not been demonstrated in the state;
 - 4.4-1b Technology or approach that is not widely used in the State, but does perform as well or better than conventional technology/approaches at lower cost; or
 - 4.4-1c Conventional technology or approaches that are used in a new application in the State.

4.5 Examples of Projects Requiring a Business Case

- 4.5-1 Constructed wetlands projects used for municipal wastewater treatment, polishing, and/or effluent disposal.
 - 4.5-1a Natural wetlands, as well as the restoration/enhancement of degraded wetlands, may not be used for wastewater treatment purposes and must comply with all regulatory/permitting requirements.
 - 4.5-1b Projects may not (further) degrade natural wetlands.
- 4.5-2 Projects or components of projects that result from total/integrated water resource management planning consistent with the decision criteria for environmentally innovative projects and that are Clean Water SRF eligible.

- 4.5-3 Projects that facilitate adaptation of POTWs to climate change identified by a carbon footprint assessment or climate adaptation study.
- 4.5-4 POTW upgrades or retrofits that remove phosphorus for beneficial use, such as biofuel production with algae.
- 4.5-5 Application of innovative treatment technologies or systems that improve environmental conditions and are consistent with the Decision Criteria for environmentally innovative projects such as:
 - 4.5-5a Projects that significantly reduce or eliminate the use of chemicals in wastewater treatment;
 - 4.5-5b Treatment technologies or approaches that significantly reduce the volume of residuals, minimize the generation of residuals, or lower the amount of chemicals in the residuals. (National Biosolids Partnership, 2010; Advances in Solids Reduction Processes at Wastewater Treatment Facilities Webinar; www.wef.org/timssnet/meetings/tnt_meetings.cfm?primary_id=10WCAP2&Action=LONG&subsystem=ORD%3cbr).
 - 4.5-5b(i) Includes composting, class A and other sustainable biosolids management approaches.
- 4.5-6 Educational activities and demonstration projects for water or energy efficiency.
- 4.5-7 Projects that achieve the goals/objectives of utility asset management plans (www.epa.gov/safewater/smallsystems/pdfs/guide_smallsystems_assetmanagement_bestpractices.pdf; www.epa.gov/owm/assetmanage/index.htm).
- 4.5-8 Sub-surface land application of effluent and other means for groundwater recharge, such as spray irrigation and overland flow.
 - 4.5-8a Spray irrigation and overland flow of effluent is not eligible for GPR where there is no other cost effective alternative.

Business Case Development

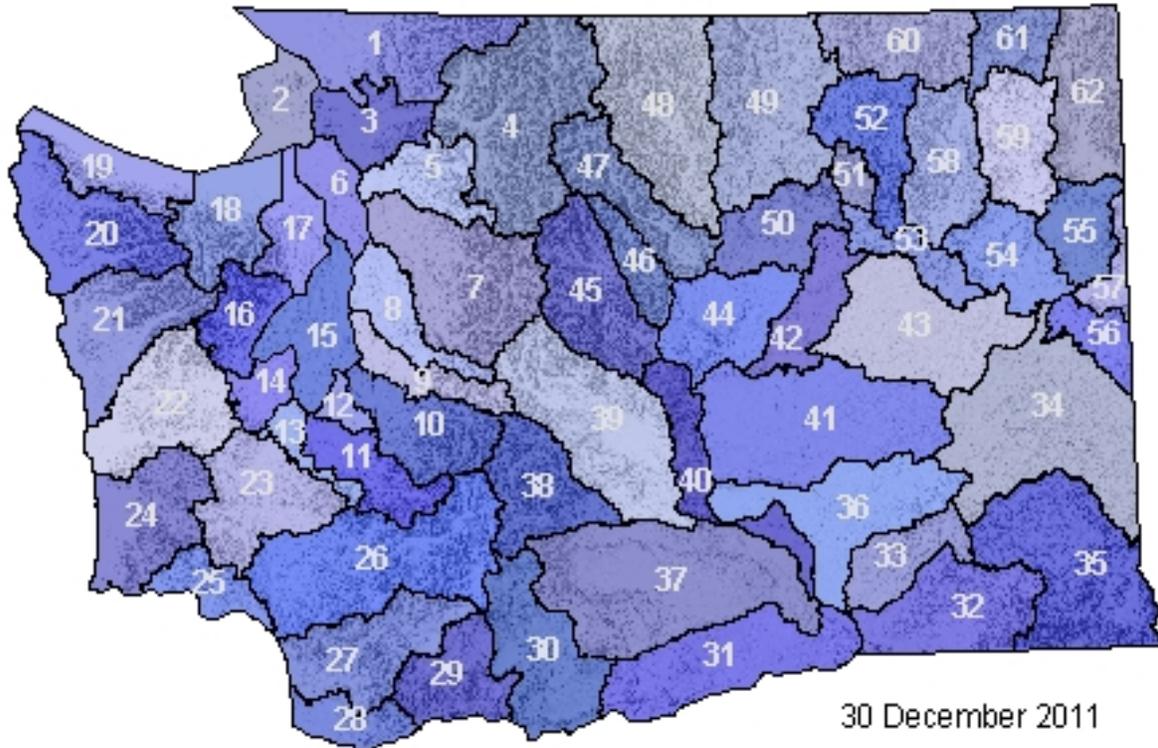

This guidance is intended to be comprehensive: however, EPA understands our examples projects requiring a business case may not be all inclusive. A business case is a due diligence document. For those projects, or portions of projects, which are not included in the categorical projects lists provided above, a business case will be required to demonstrate that an assistance recipient has thoroughly researched anticipated ‘green’ benefits of a project. Business cases will be approved by the State (see section III.A. in the *Procedures for Implementing Certain Provisions of EPA’s Fiscal Year 2010 Appropriation Affecting the Clean Water and Drinking Water State Revolving Fund Programs*). An approved business case must be included in the State’s project files and contain clear documentation that the project achieves identifiable and substantial benefits. The following sections provide guidelines for business case development.

5.0 Length of a Business Case

- 5.0-1 Business cases must address the decision criteria for the category of project
- 5.0-2 Business cases should be adequate, but not exhaustive.
 - 5.0-2a There are many formats and approaches. EPA does not require any specific one.

- 5.0-2b Some projects will require detailed analysis and calculations, while others may not require more than one page.
- 5.0-2c Limit the information contained in the business case to only the pertinent ‘green’ information needed to justify the project.
- 5.0-3 A business case can simply summarize results from, and then cite, existing documentation – such as engineering reports, water or energy audits, results of water system tests, etc.
- 5.1 Content of a Business Case
 - 5.1-1 Quantifiable water and/or energy savings or water loss reduction for water and energy efficiency projects should be included.
 - 5.1-2 The cost and financial benefit of the project should be included, along with the payback time period where applicable. (NOTE: Clean Water SRF requires energy efficiency projects to be cost effective.)
- 5.2 Items Which Strengthen Business Case, but Are Not Required
 - 5.2-1 Showing that the project was designed to enable equipment to operate most efficiently.
 - 5.2-2 Demonstrating that equipment will meet or exceed standards set by professional associations.
 - 5.2-3 Including operator training or committing to utilizing existing tools such as Energy Star’s Portfolio Manager or CUPSS for energy efficiency projects.
- 5.3 Example Business Cases Are Available at www.srfbusinesscases.net/.

Appendix F. Map of Water Resource Inventory Areas (WRIAS) in Washington

This page purposely left blank

Appendix G. Median Household Income Table

The U.S. Census Bureau provides median household income (MHI) data through the American Community Survey (ACS). State and community profiles, including MHI estimates, are released on an annual basis. MHI estimates for states, cities, towns, and census designated places (CDP) are included in the five-year data series produced by ACS. Searches of the ACS database can be conducted at <http://factfinder2.census.gov/faces/nav/jsf/pages/searchresults.xhtml?refresh=t#>.

MHI surveys

The MHI data in Table G-1 are from the ACS five-year estimates available on July 24, 2013. Ecology uses the MHI data in Table G-1 when making hardship determinations. If an applicant disputes the MHI estimate used by Ecology, the applicant may conduct a scientific survey to determine the MHI for the project area. If an applicant chooses to conduct a MHI survey, they must adhere to the Infrastructure Assistance Coordinating Council (IACC) *Income Survey Guide*, and the results must be approved by Ecology. The IACC Income Survey Guide can be found at www.infracommunity.wa.gov/2013%20IACC%20Income%20Survey%20Guidance.pdf.

Appendix H. Developing Public Communication and Education Project Proposals

Following is a checklist that applicants can refer to in developing public communication and education project proposals. The goal of the checklist is to help in the design of projects that are effective at changing behaviors and achieving environmental results.

Project background

- Consider the water quality problem that is the focus of the project; target population; geographic area; socio-economic status of targeted population; predominant land uses; and the behavioral change you seek to achieve for each target identified (source of the water quality problem or issue - one target could be responsible for several problems).
- What knowledge, attitude, and skills do you desire in the targeted population?
- Be careful to use one or two primary objectives and be realistic about what you can accomplish during the grant period.
- If this is a continuing attitude or behavior change that you wish to affect, how do you propose to sustain it?

Project design

- Agree on the optimal way to identify and reach your audiences. Include local audiences that speak languages other than English.
- Identify common needs in participants and how the project can fulfill these needs.
- Identify conflicting needs (associated with barriers analysis).
- Identify the specific barriers, both internal to the person or organization as well as external, such as lack of knowledge or conditions, and practical barriers to desired change (no place local to change oil properly). Tell us how your project will remove these barriers.
- Identify the project team and their qualifications.
- Will you use volunteers and if so, how? How will you recruit and retain them?
- Identify community leaders, decision makers, and trusted peers and leaders within business, non-profit, and community groups that have similar interests in environmental change/ sustainability. These are the people and organizations that will help you advance your project and its objectives. Please explain how you will leverage their influence to amplify your results.
- Determine resources you will use, including training materials, facilities, media and corresponding distribution strategy. Conduct a regional search for existing materials before producing any new educational flyers or pamphlets.
- Also consider: (a) regular reminders of the desired behavior; (b) trusted and credible sources for communication; (c) communication that is direct, simple, personal and vivid; (d) leaders, described above, to model and promote the behavior you seek (what kind of

changes do you want people to make in the way they make decisions?); (e) personal commitments from groups and individuals.

- Plan to pilot and field test your materials or activities with a small segment of your intended audience before “going big” and final.
- Make sure that your plan can be adjusted during the project to accommodate lessons learned. (Can it be changed in mid-course?)
- Design your project with evaluation tools and methodologies in mind and don’t make it an afterthought.

Education plan

- State measurable objectives and goals of the project.
- List the performance measures you will use to assess how effective your project was. Success is defined as progress towards meeting your goals and objectives.
- List your specific actions, implementing entities and both timetable and cost per action.
- List media and promotions to be utilized (including the use of music and art).
- For Public Participation, record the number of participants at events, number of one-on-one contacts, and number of groups interested.

Monitoring and post-project evaluation

- What kind of assessment and evaluation tools will you use to evaluate the effectiveness of your program? Examples include customer feedback surveys (telephone tends to work better), interviews, focus groups, observations, and, before and at least after six months, “records” that can infer change.
- How will you measure the participant’s knowledge, skill, attitudes, and actions?
- How is the evaluation strategy linked to the stated goals and objectives?
- How will you evaluate presenter activities and materials?
- How will you monitor or evaluate the relationship between the educational activities and changes in behavior and water quality changes?

Suggested resources

- Visual Tools for Watershed Education; see: www.neefusa.org/pdf/watershedfinal.pdf.
- “Fostering Sustainable Behavior” by Doug McKenzie-Mohr and William Smith.
- “Targeting Outcomes of Programs” by Claude Bennett and Kay Rockwell.

Appendix I. Direct Seed Systems

Direct seed systems are eligible for Water Quality Program financial assistance. Direct seed systems plant and fertilize into undisturbed soil and eliminate full width tillage for seedbed preparation. Implements used for direct seed disturb only a narrow strip of soil and retain a majority of residue from the previous crop. Direct seed systems significantly reduce erosion, improve soil quality, reduce fuel consumption, and are a viable alternative to traditional, full tillage systems.

Required eligibility conditions for all activities

- Cropland acres currently planted with a single pass, low disturbance direct seed are not eligible.
- Rental and custom application cost reimbursement will be provided to only those producers or landowners that have not previously implemented a single pass, direct seeding system.
- A landowner or producer that owns a single pass, low disturbance direct seed drill is not eligible for rental or custom application cost reimbursement.
- The landowner and producer must use a direct seed system or plan for three full years.
- A single pass, low-disturbance direct seed drill must be used for all planting.
- Crop residue cannot be burned.
- Grant recipients must offer educational opportunities in conjunction with direct seed programs. Examples of such opportunities include a mentoring program, workshops, or referrals to direct seed organizations. Grant recipients may coordinate with other Conservation Districts, organizations or associations to fill this need.
- Cropland acres with any post-harvest or pre-planting tillage are not eligible. This includes the use of inversion tillage equipment such as moldboard plows, chisel plow, rod weeders and disks. Conventional summer fallow is not eligible.
- To be eligible for reimbursement, the public entity recipient and the landowner and producer must sign a landowner agreement prior to renting direct seed equipment or contracting with a custom applicator to plant with a single pass, low disturbance direct seed drill.
- The grant recipient must report on the following information (additional requirements may be added as part of any grant contract):
 - Number of acres enrolled in program.
 - Number of landowners/producers enrolled.
 - Location of acres enrolled including information such as county, farm number, tract number, and field number. GIS layers and other relevant spatial reference information may also be required.

Eligible direct seed activities

Equipment rental cost reimbursement

- Producers may be reimbursed for a portion of the cost of renting a single pass, low-disturbance direct seed drill.
 - Producers may be reimbursed from the grant for a portion of the cost to rent a single pass, low disturbance drill.
 - Producers must agree to try the practice for a full three year direct seed rotation.
 - Cost share is available for only a first-time, full three year direct seed rotation. Reimbursement payments will be made for eligible expenses during the initial three year rotation only.
 - If a three year direct seed rotation is not completed, the producer is not eligible for any future direct seed reimbursements.
 - Cost share must not exceed \$25 dollar per acre, up to 200 acres, per producer. Total eligible cost shall not exceed \$5,000 per producer, per year for up to three years.
 - The grant recipient must verify the number of acres planted with a single pass, low disturbance direct seed drill before reimbursement is provided.

Cost of custom application fee reimbursement

- Producers may be reimbursed for a portion of the cost of hiring a custom applicator to plant with a single pass, low disturbance direct seed drill.
 - Producers may be reimbursed from the grant for a portion of the cost to have a custom applicator seed a section of the producer's land with a single pass, low disturbance drill.
 - Producers must agree to try the practice for a full three year direct seed rotation.
 - Cost share is available for only a first-time, full three year direct seed rotation. Reimbursement payments will be made for eligible expenses during the initial three year rotation only.
 - If a three year direct seed rotation is not completed, the producer is not eligible for any future direct seed reimbursements.
 - Cost share most not exceed \$25 dollar per acre, up to 200 acres, per producer. Total cost shall not exceed 5,000 per producer, per year for up to three years.
 - The grant recipient must verify the number of acres planted with a single pass, low disturbance direct seed drill before reimbursement of is provided.

Direct seed equipment purchase

- Public entities are eligible to receive a one-time grant to purchase a single pass, low disturbance direct seed drill for the purpose of providing regional access to direct seed equipment and facilitating education, outreach, and technical assistance to promote the benefits of direct seeding systems.
 - Grant recipients must sign a 10-year maintenance agreement to keep the drill in best condition.

- The drill must be a low disturbance, one pass drill.
- The cost share for equipment shall not exceed \$150,000 per grantee.
- Producers may not receive rental reimbursement or custom application reimbursement payments from an Ecology funded program when using a seed drill purchased with an Ecology grant.
- Grant recipients may charge a fee for the use of the Ecology funded drill to cover the cost of maintenance and storage. However, the fees should be set to encourage broad participation and must not be set to gain a profit.
- Grant recipients must provide staff with knowledge of direct seed systems or equivalent experience.

This page purposely left blank

Appendix J. Livestock Off-stream Watering Facilities

Off-stream watering is used to provide an alternative source of watering where fencing or other method(s) are used to exclude livestock from streams in order to protect water quality. If livestock exclusion fencing is installed as part of a riparian protection/restoration project and meets the minimum standards for that BMP, grant dollars may be used to install an off-stream watering facility. Off-stream watering facilities (including well construction) are conditionally eligible for Water Quality Program financial assistance for projects that include privately owned livestock operations.

The following conditions must be met for off-stream watering facilities to be considered for a Water Quality program grant:

- 1) Land use must currently be dedicated to livestock or milk production.
- 2) A landowner agreement must be signed between the property owner and the recipient before the off-stream watering facility is installed.
- 3) Off-stream watering systems may include water gaps in fencing for emergency watering purposes only. If the recipient wishes to design water gaps, a plan must be submitted to Ecology's Project Manager which details the design and a description of how potential impacts to water quality resulting from water gaps will be minimized.
- 4) Livestock exclusion fencing must provide a minimum setback from the ordinary high water mark in the riparian area consistent with the riparian restoration guidance found in [Appendix L](#).
- 5) Installation of native trees and shrubs is required within the buffer created by the exclusion fencing to provide controlled overland flow filtering of pollutants (in accordance with , [Appendix L](#) and all applicable NRCS FOTG Practices).
- 6) Off-stream watering facilities (not including well construction) may be provided for less than 20 Animal Units (see Animal Units Table J-2 of this section).
- 7) For wells to be eligible, operations must have (on or before the beginning of the funding cycle) at least 20 Animal Units (see Animal Units Table J-2 of this section). The cost for well drilling is included in the funding caps associated with off-stream watering facilities. A cost-effective analysis for wells must be completed in accordance with the following criteria:
 - a) Gravity feeding or pumping from existing surface and groundwater sources and water hauling are to be considered as first choices. If these alternatives are not feasible, dug or drilled wells may be considered.
 - b) Wells must be either less costly or demonstrably more cost-effective (may include analysis of such issues as hydraulic flow, sediment clogging, freezing).
 - c) The practice chosen must be in accordance with the conservation plan (or more focused plan involving livestock exclusion and off-stream water provisions).
 - d) Plan(s) must be completed and approved by at least the respective conservation district before off-stream watering is installed.

- 8) Financial Assistance Limits and Other Provisions.
- a) Off-stream livestock water provisions are eligible only where permanent and continuous exclusion from waters of the state is provided.
 - b) Off-stream livestock water provisions are eligible for financial assistance based on the continuous linear length of riparian exclusion fence per land owner. Financial assistance is limited to 75% of the total eligible costs. See Table J-1 below for limits. Maximum of \$30,000 per landowner.
 - c) Off-stream water developments must be located a distance away from surface waters that will prevent water quality impacts.
 - d) Loans may be issued to cover up to 100 percent of eligible project cost.
 - e) Pumps, pipes, water troughs, and wells, as needed, are eligible.
 - f) All components of solar powered pumps are project eligible. Electrical or mechanical power provisions are only eligible if existing infrastructure is available that can be utilized at a minimal cost.
 - g) Heavy use area protection at watering facilities is eligible as needed. The cost of heavy use area protection is included in the final cost of the off-stream watering facility and is included in the funding limitations.
 - h) The loan or grant will not reimburse recipients for costs associated with unsuccessful well drilling.
 - i) Cross fencing is ineligible.
 - j) Third party contributions above the eligible financial costs are eligible to be counted toward match.

Table J-1: Miles of Livestock Riparian Exclusion and Financial Assistance Limits

Miles of Livestock Riparian Exclusion	Financial Assistance Limit (per project)
Less than ½ mile	75% of total eligible cost or \$6,000 (whichever is less)
Greater than or equal to ½ mile and less than 1 mile	75% of total eligible cost or \$9,000 (whichever is less)
Greater than or equal to 1 mile and less than 1.5 miles	75% of total eligible cost or \$12,000 (whichever is less)
Greater than or equal to 1.5 miles and less than 2 miles	75% of total eligible cost or \$18,000 (whichever is less)
Greater than or equal to 2 miles and less than 2.5 miles	75% of total eligible cost or \$24,000 (whichever is less)
Greater than or equal to 2.5 miles	75% of total eligible cost or \$30,000 (whichever is less)

Animal Units as defined in WAC 173-224-030 are shown in Table J-2.

Table J-2: Animal Units

Animal Type	Number of Animal Units per Animal
Dairy Cows	
Jersey Breed	
Milking Cow	0.900
Dry Cow	0.900
Heifer	0.220
Calf	0.220
Other Breeds	
Milking Cow	1.400
Dry Cow	1.000
Heifer	0.800
Calf	0.500
Feedlot Beef	0.877
Horses	0.500
Sheep	0.100
Swine for breeding	0.375
Swine for slaughter	0.110
Laying hens & pullets > 3 months	0.004
Broilers & pullets < 3 months	0.002

Example Calculation: 23 Feedlot Beef x 0.877 = 20 Animal Units.

This page purposely left blank

Appendix K. Livestock Feeding BMPs

Introduction

The following BMPs are intended to support the relocation of livestock feeding areas that threaten water quality, or enhance existing feeding areas distanced from surface waters. A combination of these BMPs may be installed when appropriate. Funding for the following BMPs only applies to projects that will improve existing water quality problems and may not be used to rebuild feeding facilities where the primary purpose is to repair existing structures. All projects must be approved by Ecology's Project Management Team before installation.

Conditions for all livestock feeding BMPs

- Operations meeting the definition of the Concentrated Animal Feeding Operation Permit are not eligible for funding.
- When BMPs are installed, new feeding areas must be located, or pre-existing areas must be relocated so that the presence of livestock will no longer threaten to impact surface water quality. Grant recipients must provide assurances to the Ecology Project Manager that the location or relocation of the new or existing feeding area optimizes water quality protection. Ecology will not fund projects that are located too close to waters of the state. BMPs are eligible only when livestock presence currently occurs within or adjacent to riparian areas and can be an assumed threat to the integrity of the riparian area and water quality.
- All BMPs must be built and located according to NRCS specifications.
- The producer must exclude livestock from all waters of the state, with a minimum setback from the ordinary high water mark consistent with the riparian restoration guidance found in [Appendix L](#).
- The owner or operator must have a plan in place to manage manure.
- The landowner must sign a landowner agreement.
- Roof runoff structures on existing structures may be conditionally eligible for reimbursement where direct water quality improvements can be achieved and must be approved by Ecology's Project Management Team prior to installation.

Eligible livestock feeding BMPs

Heavy use area protection

- Heavy use area protection is eligible only to protect critical areas directly surrounding feeding and watering locations.
- Building permanent feed lots where livestock will be confined continuously throughout the year is not eligible for Heavy Use Area Protection funding.
- Heavy use area protection is eligible for 75 percent of the total eligible cost, up to a maximum of \$7,500 per landowner.

- Concrete and other cement based materials, rock aggregate, and other appropriate materials are eligible for funding.
- Heavy use area protection must prevent erosion and polluted runoff at feeding and watering facilities.
- Heavy use area protection areas must be designed and constructed according to NRCS standards.
- The producer must use a waste storage facility meeting the criteria below to be eligible for heavy use area protection.

Waste storage facilities

- Waste storage facilities, waste storage covers, and roof runoff structures are eligible if constructed to NRCS standards.
- The total package of waste storage BMPs is eligible for 75 percent of the total eligible cost, up to a maximum of \$12,500 per land owner.
- Waste storage facilities must include a permanent roof, curbed concrete floor, and roof runoff structures.
- Waste storage facilities must be designed and stamped by a professional engineer.
- Building permits must be obtained where required.
- Waste storage facilities must be part of a manure management plan.

Windbreaks

- Windbreaks are planted tree rows used to shelter livestock from summer sun and winter wind, and therefore encourage the congregation of livestock and utilization of pasture or rangeland away from the riparian area.
- Windbreaks are eligible to support the relocation of winter feeding operations upland, away for riparian areas, and to prevent water quality impacts.
- Windbreaks are eligible for 75 percent of the total eligible cost, up to a maximum of \$1,000 per landowner.

Appendix L. Riparian Restoration and Planting

The following are requirements when implementing a riparian restoration or riparian planting project.

Environmental Protection Agency and National Marine Fisheries Service buffer requirements

Ecology has increased the minimum requirements for riparian buffers to protect and restore salmon fisheries and achieve water quality standards. These new requirements apply to funding for projects that address nonpoint pollution problems, including Section 319 grants, Centennial Clean Water Fund grants or loans, and the Water Pollution Control State Revolving Fund loans.

In July 2011, Western Washington Treaty Tribes released the “Treaty Rights at Risk” paper. The paper stated treaty-reserved rights to harvest salmon and steelhead are being impaired by ongoing salmon habitat loss. To address concerns outlined in the paper, tribes approached federal government agencies that fund environmental work to improve salmon habitat and restore sustainable salmon fisheries to levels that meet treaty rights.

In response to tribal concerns, the U.S. Environmental Protection Agency (EPA) and the National Oceanographic and Atmospheric Administration (NOAA) notified the Department of Ecology that it must take additional actions to protect salmon and salmon habitat. The EPA is requiring Washington State to include conditions on federal pass-through grants to be consistent with National Marine Fisheries Service (NMFS) buffer guidance to help protect and recover Washington’s salmon runs.

Ecology is attaching the new, special conditions to grant funds to increase levels of riparian protection to both protect and restore salmon fisheries and help achieve water quality standards.

Conditions of the funding agreement

All restoration activities must also be consistent with the Stream Habitat Restoration Guidelines, available at <http://wdfw.wa.gov/publications/01374/wdfw01374.pdf> and the requirements below.

EPA and NMFS riparian buffers

The minimum buffer size for surface waters (on each side) will be consistent with Table L-1 and additional guidance provided below. Table L-1 was developed from information provided by NMFS. Buffer widths must be measured starting from the ordinary high water mark.

Table L- 1: Minimum Buffer Requirements for Surface Waters

Category	Functions	Minimum Buffer Width West of Cascades	Minimum Buffer Width East of Cascades
A. Constructed Ditches, Intermittent Streams and Ephemeral Streams that are not identified as being accessed and were historically not accessed by anadromous or Endangered Species Act (ESA) listed fish species	Water quality, shade, source control and delivery reduction.	35' minimum	35' minimum
B. Perennial waters that are not identified as being accessed and were historically not accessed by anadromous or ESA listed fish species	Water quality, shade, source control and delivery reduction.	50' minimum	50' minimum
C. Perennial, intermittent and ephemeral waters that are identified as being accessed or were historically accessed by anadromous or ESA listed fish species	Water quality, large wood debris (LWD) for cover, complexity and shade and microclimate cooling, source control and delivery reduction.	100' minimum	75' minimum
D. Intertidal and estuarine streams and channels that are identified as being accessed or were historically accessed by anadromous or ESA listed fish species	Water quality, habitat complexity	35'-75' minimum, or more as necessary to meet water quality standards	N/A

Additional guidance

- To determine which buffer category applies to a water body, EPA and Ecology have developed a mapping tool available on the FY2015 funding page at www.ecy.wa.gov/programs/wq/funding/cycles/FY2015/index.html.
 - If surface water is present on a property but not shown on the map, a 35 foot minimum buffer width will apply.
 - If a water body is identified as “Category B” in the above table, the grant recipient must contact the regional Washington Department of Fish and Wildlife (WDFW) or tribal fish biologist to confirm that the water body is not currently or historically used by anadromous or listed fish. If the fish biologist informs the recipient of fish presence, then the buffer width must meet “Category C” requirements.
 - If a water body is impeded by a man-made structure (e.g. culvert, dam, etc.) which prevents anadromous or ESA listed fish access, then the buffer width must meet “Category C” requirements.
 - WDFW Fish Biologist Contact Information: http://wdfw.wa.gov/conservation/fisheries/fish_district_bios.pdf
 - WA State Tribes and Tribal Reservations Map (with links): www.ecy.wa.gov/services/gis/maps/state/tribal_res.pdf

- The buffer table above establishes minimum requirements for funding eligibility purposes. Projects that include buffers that are larger than the minimums are preferred, especially when stated in a TMDL or other watershed improvement plan. To maintain fully functional riparian ecosystems and provide sufficient habitat to meet the needs of fish and wildlife, it is recommended that the recipient use Washington Department of Fish and Wildlife buffer widths table whenever those recommendations are larger.
- As stated in the *Stream Habitat Restoration Guidelines*, if the 100-year floodplain exceeds these widths, the riparian buffer width should extend to the outer edge of the 100-year floodplain.
- Recipients are required to plant the buffer established by the fencing setback with native trees and shrubs to provide a higher level of water quality improvement. Grass filters strips are not sufficient to satisfy this requirement.
- When buffers are established in forested areas, the buffer width must also be consistent with Forest Practices Rules.
- Buffers established as part of a Water Quality Program grant may not violate county Critical Area Ordinances, county Shoreline Rules, or other state and local regulations.
- Ecology may allow a conditional exemption from the minimum buffer width requirements where the presence of a structure impedes the ability to meet the conditions. The recipient must submit an adequate justification as to why these cannot be met and an alternate written plan to Ecology's Project Manager for review and written approval.

Riparian plantings

- The recipient must develop site-specific plans for all riparian buffers prior to implementation which include plant locations and species. The plan must be based on an assessment of native plant associations and community types.
- The recipient must only plant species that are riparian in nature and indigenous to the primary watershed where the buffer is being established.
- The recipient must use, to the greatest extent possible, genetically appropriate plant materials collected from the primary or secondary watershed where the buffer is to be established.
- The recipient must utilize, to the greatest extent possible, plant species that are early successional within the primary watershed. Early successional species are those whose characteristics are such that they are first to colonize after a disturbance.

Streambank protection

- Streambank protection projects must not stand alone, but be part of a larger riparian buffer project. The project must include the buffer and planting requirements listed above.
- Rock should not be used to armor a bank against the erosive forces of a stream or river unless a bridge, road, or other manmade structure cannot be protected by any other means. In any situation where rock is to be used, the RECIPIENT must submit the design to Ecology's Project Manager for an evaluation.

- Streambank protection designs must be consistent with the Aquatic Habitat Guidelines: Integrated Streambank Protection Guidelines document which can be found at <http://wdfw.wa.gov/publications/00046/>.

Relevant definitions

Anadromous fish

Fish that live their adult lives in the ocean but move into freshwater streams to reproduce or spawn (e.g., salmon); see: www.nmfs.noaa.gov/pr/glossary.htm#anadromous.

Constructed ditch

A regularly maintained man-made trench or furrow dug in the ground for the primary purpose of conveying or draining surface water, storm water or irrigation water, that may or may not, contain water at all times of the year.

Ephemeral stream

A stream or portion of a stream which flows briefly in direct response to precipitation in the immediate vicinity, and whose channel is at all times above the groundwater reservoir.

ESA listed fish species

The [Endangered Species Act of 1973 \(ESA\)](#) was signed on December 28, 1973, and provides for the conservation of [species that are endangered or threatened](#) throughout all or a significant portion of their range, and the conservation of the ecosystems on which they depend. The ESA replaced the Endangered Species Conservation Act of 1969; it has been amended several times. A "[species](#)" is considered: 1) endangered if it is in danger of extinction throughout all or a significant portion of its range, and 2) threatened if it is likely to become an endangered species within the foreseeable future. There are [approximately 2,100 total species](#) listed under the ESA. Of these species, approximately 1,480 are found in part or entirely in the U.S. and its waters; the remainder are foreign species. NOAA's National Marine Fisheries Service (NMFS) and the [U.S. Fish and Wildlife Service \(USFWS\)](#) share responsibility for implementing the ESA. Generally, USFWS manages land and freshwater species, while NMFS manages marine and "[anadromous](#)" species. NMFS has jurisdiction over [94 listed species](#). <http://www.nmfs.noaa.gov/pr/laws/esa/>

Exclusion fencing

A constructed barrier to livestock, wildlife or people for 1) dividing pasture for rotational grazing; 2) fencing livestock out of a riparian area; and 3) facilitating the application of conservation practices that treat the soil, water, air, plant, animal, and human resource concerns.

Floodplain

Any lowland that borders a stream and is inundated periodically by the stream's waters.

Intermittent stream

A stream where portions flow continuously only at certain times of the year, for example when it receives water from a spring, ground-water source or from a surface source, such as melting snow (i.e. seasonal). At low flow there may be dry segments alternating with flowing segments. These streams are also defined as no measurable flow during thirty (30) consecutive days in a normal water year.

Ordinary high water mark (O)HWM

The point on the sides of streams or lakes which is historically or normally at water's edge, as identified by a visible change in vegetation and/or soil. It is also generally, the lowest point at which perennial vegetation grows on the streambank. The ordinary high water mark can usually be identified by physical scarring along the bank or shore, or by other distinctive signs.

Perennial stream

A stream or portion of a stream that flows year-round, is considered a permanent stream, and for which base flow is maintained by ground-water discharge to the streambed due to the ground-water elevation adjacent to the stream typically being higher than the elevation of the streambed.

Riparian buffers

Riparian buffers are generally recognized as a “separation zone” between a water body and a land use activity for the purposes of protecting ecological processes and water quality. The riparian buffer usually extends from the stream's ordinary high water line to the outer edge of the floodplain. Riparian buffers provide essential functions for river and stream ecosystems, including cover and shade, a source of fine or coarse woody material, nutrients, and organic and inorganic debris that maintain stream ecosystem function. As used here, riparian buffers are defined as separation zones that are relatively undisturbed by humans and contain native vegetation consistent with the potential of the site.

Figure L-1 provides a diagram depicting a typical stream showing the active floodplain, the ordinary high water mark (OHWM), the riparian zone, and the top of the bank.

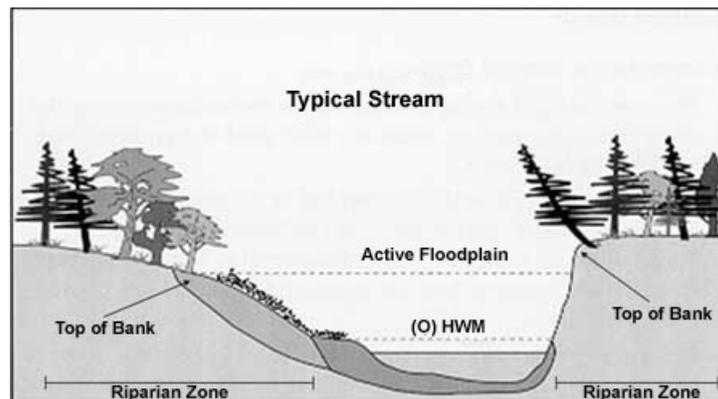

Figure L- 1: Diagram of a Typical Stream. Figure is a reproduction of a figure obtained from Fisheries and Oceans Canada at <http://www.pac.dfo-mpo.gc.ca/habitat/Glossary-glossaire-eng.htm>.

This page purposely left blank

Appendix M. Cultural and Historic Resources Review Guidance

This guidance provides information for projects funded by the Department of Ecology's (Ecology) Revolving Fund, Centennial, and Section 319 programs to meet Executive Order 05-05 and Section 106 of the National Historic Preservation Act requirements.

Please note that the cultural resources review process is for government-to-government communication. Requirements of this process will not be met until Ecology has provided information to the Tribes and the Department of Archaeology and Historic Preservation (DAHP) about project activity.

Recipients must comply with all cultural resources review requirements prior to implementing any project that involves ground disturbing activities.

Federal and state laws and rules require the funding agency (Ecology) to contact the Department of Archaeology and Historic Preservation (DAHP) and affected tribes regarding the proposed project activities. Any prior communication between the recipient, the DAHP, and the tribes is not sufficient to meet requirements.

Another agency's cultural resources may be used to meet Ecology's requirements. To do this, recipients should submit the review documents to Ecology's Project Manager for review and approval.

Any ground disturbing activities that occur prior to the completion of the cultural resources review process will not be eligible for reimbursement. Activities associated with cultural resources review are grant and loan eligible and reimbursable. Any mitigation measures as an outcome of the process will be requirements of the agreement.

This process must be followed even if the recipient has been working with Tribes on the project.

- 1) The recipient must complete DAHP's EZ-1 form or conduct a site specific survey. A site specific survey is only required for areas where there is a high sensitivity and potential to discover cultural resources. If the project will alter a building that is 50 years or older, the recipient must complete an EZ-2 Form. The EZ forms and Survey Coversheet can be downloaded from DAHP's website at www.dahp.wa.gov/governors-executive-order-05-05.
- 2) The recipient must write an inadvertent (IDP). An IDP does not need to be site-specific, however it can be a general procedure for all projects implemented by the organization. IDP must be distributed and reviewed by all participating parties prior to any on-the-ground work so they are fully informed of the appropriate procedures.
- 3) The recipient will send an electronic .pdf version of the EZ Form, any tribal communication, and identify the potentially interested Tribes to Ecology's Project Manager. The Project Manager will forward the electronic copies of the paperwork to Ecology's SERP Coordinator.

- 4) Ecology will send out letters with the EZ Form or survey to Tribes and DAHP. The Tribes have a 30 day comment period to initiate a more in-depth discussion about the project, submit any comments, or make an effect determination on the project. After the 30 day comment period, if there has not been a determination of impact by a Tribe, Department of Archaeology and Historic Preservation (DAHP), or other interested party, the project may proceed as planned.

Figure M-1 provides a flowchart outlining the review process and additional information for cultural resources review.

Cultural Resources Review Process

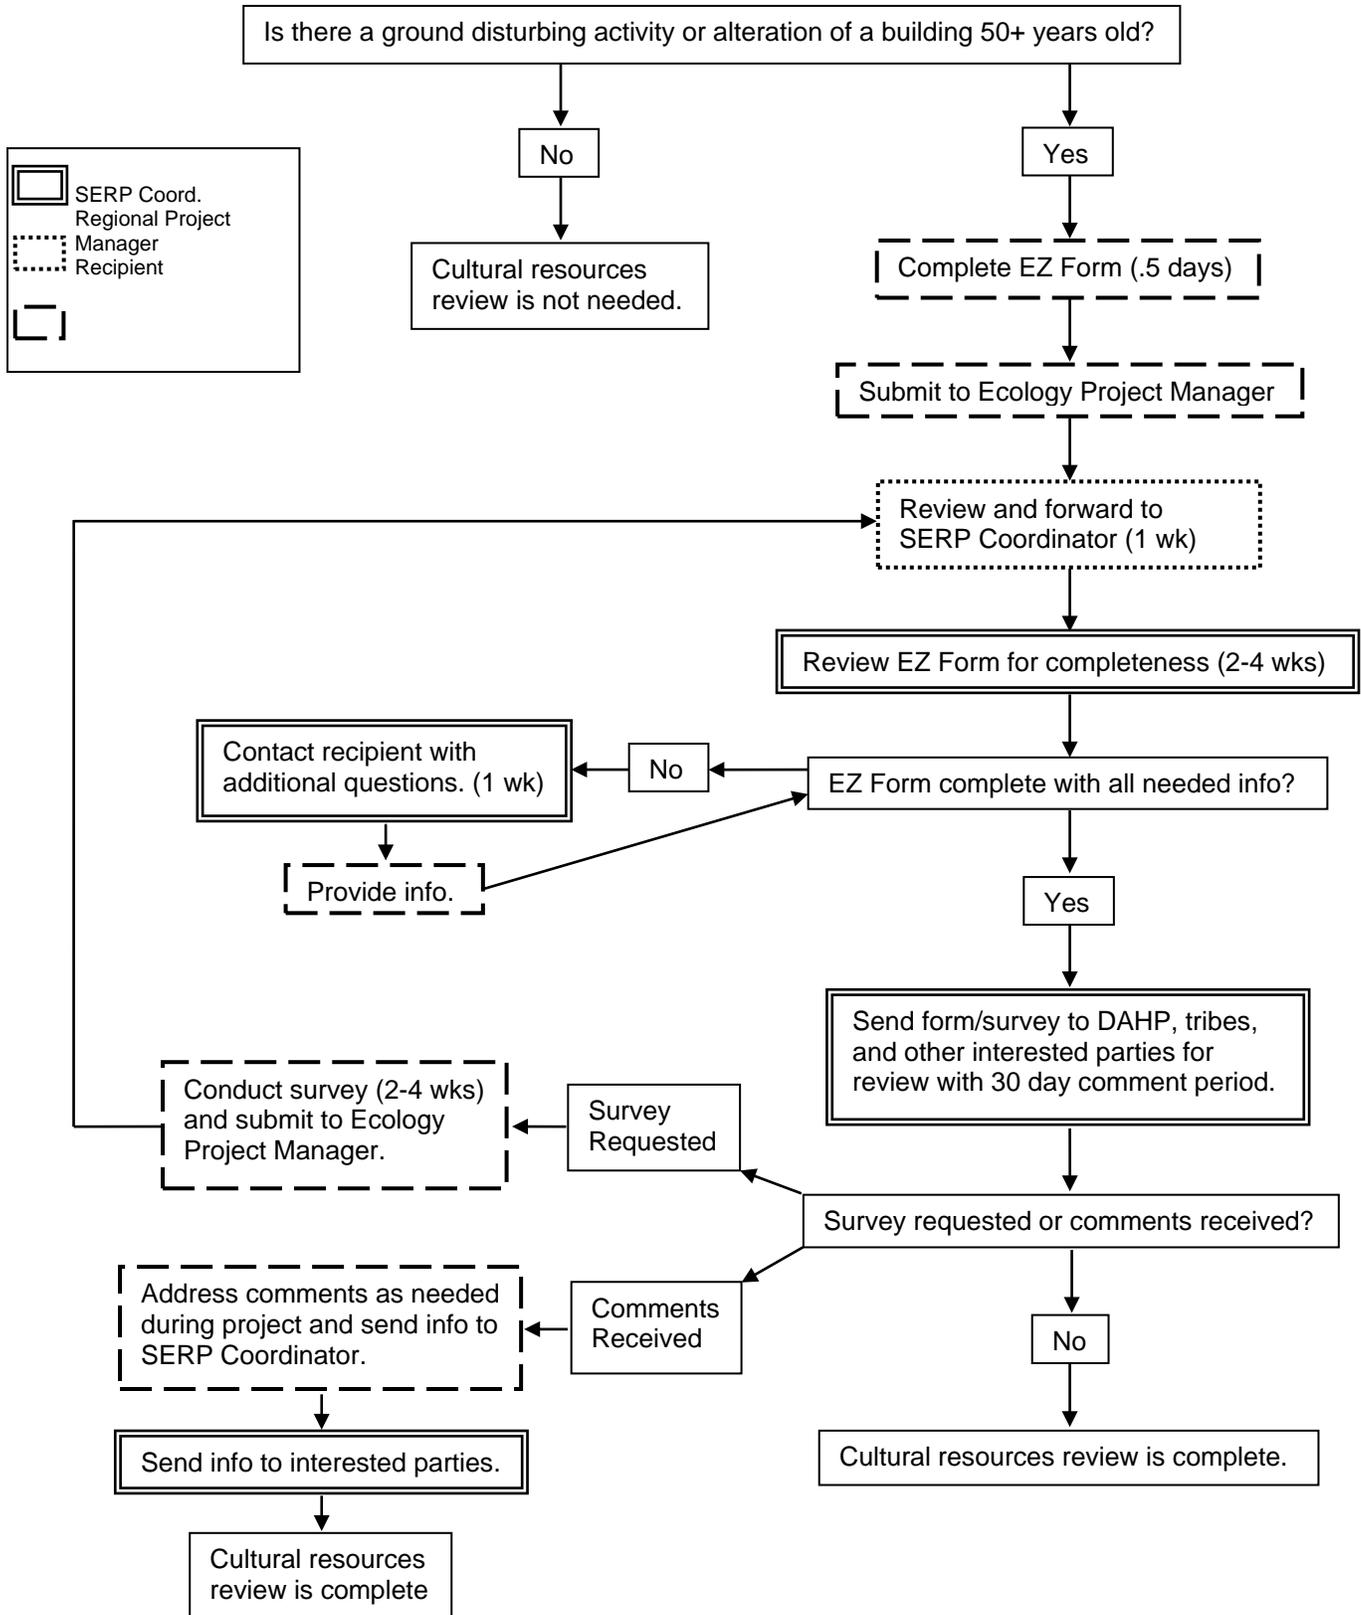

Figure M- 1: Cultural Resources Review Flowchart

Section 106 versus Executive Order 05-05

- Section 106 of the National Historic Preservation Act is applied to actions funded by federal agencies. Section 106 applies to the Water Quality Program's State Revolving Fund Loan Program and Section 319 Grant Program.
 - If Section 106 has been conducted for a project by another federal agency, it may be adopted by Ecology for either state or federally funded projects. Please contact your Project Manager the make sure a review can be adopted.
- Governor's Executive Order 05-05 is required for all state funded capital projects. This includes projects funded by the Centennial Clean Water Program, Stormwater Retrofit and Low Impact Development Grant Program, Stormwater GROSS Grants, and others.
 - Executive Order 05-05 cannot be adopted to meet Section 106 requirements for federally funded projects.
 - Ecology can adopt another state agency's 05-05 process to meet cultural resources review requirements. Please contact your Project Manager the make sure a review can be adopted.

Correspondence: Ecology is responsible, as the funding agency, for contacting the Department of Archaeology and Historic Preservation (DAHP), tribes, and other interested parties to meet cultural resource review requirements. Previous approval from DAHP does not fulfill these requirements. Communication that may have occurred during a SEPA review is not sufficient to meet cultural resources review requirements.

EZ Forms: found at bottom of page www.dahp.wa.gov/governors-executive-order-05-05.

- EZ-1: This form is to provide information about ground disturbing activities.
- EZ-2: This form is to provide information about alterations to buildings 50 years or older.

Ground Disturbing Activities: This refers to any work that impacts the soil or ground from its current conditions. There is no threshold for this criterion. If the activity requires any work that goes below the surface of the ground, it requires a cultural resources review.

Changes to Project Design or Project Area: If there are any changes made to the project area or design after cultural resources review has been completed, review will have to be reinitiated in order to capture the changes. It is suggested that cultural resources review begin only after the final design is complete to expedite the process.

Timing: The time period it takes for cultural resources review occurs cannot change. Please plan ahead to ensure enough time is permitted prior to implementation.

Eligibility

- All activities associated with cultural resources review are grant and loan eligible.
- Construction or BMP implementation that occurs prior to cultural resources review will not be eligible for reimbursement.

Questions? Contact your Project Manager.

Appendix N. Scoring Guidance

Ecology evaluates project proposals based on responses provided on eight forms of the application. A total of 1,000 points are available. In order to obtain funding a project must receive a score of at least 600 total points, and it must receive at least 125 of the 250 possible points on the Water Quality and Public Health Improvements Form. Table N-1 provides a list of the forms that are scored, details on how points are awarded, and some guidance on scoring.

Table N- 1: Application Scoring Guidance

Scope of Work Form
<p><u>Scoring</u></p> <p>This form is worth up to 250 total points as follows.</p> <ul style="list-style-type: none"> • 0-100 points: The Scope of Work represents a complete and concise description of the project tasks and outcomes, including deliverables and timelines. • 0-150 points: The project directly and measurably addresses a water quality problem. <p><u>Guidance</u></p> <ul style="list-style-type: none"> • Evaluators award points for a clear, complete, and well thought-out scope that directly addresses a water quality problem. The scope must demonstrate an understanding of the work required to implement and complete the project. • For projects that implement BMPs on private property, evaluators will factor the status of landowner commitments to implement BMPs into the score. Applicants must provide detailed maps for each subject property showing BMP locations and a detailed list of BMPs to be implemented on each property including length of exclusion fencing, feet of stream buffers, acres of restoration, or other applicable numerical information about the BMPs.
Task Costs General Form
<p><u>Scoring</u></p> <p>This form is worth up to 150 total points as follows.</p> <ul style="list-style-type: none"> • Up to 50 points: The cost estimate process is reasonable. • Up to 100 points: The project budget represents a good value for the work and water quality benefits achieved. For nonpoint source activity projects requesting grant funding, the applicant identifies adequate matching funds. <p><u>Guidance</u></p> <ul style="list-style-type: none"> • Evaluators award points for a complete, reasonable budget that is consistent with the tasks described in the Scope of Work. • Evaluators award points for projects with accurate cost estimates. Estimate accuracy may be judged based on experience with past or ongoing projects, through consultation with other entities that have related experience, or through a planning process such as value analysis.

- Evaluators award points for cost-effective projects that represent a good investment of public funds to achieve water quality benefits.
- Nonpoint activity projects implementing BMPs must provide a detailed cost estimate for each BMP proposed for installation, as detailed in the Scope of Work.
- Construction projects must attach a detailed cost estimate for construction and engineering services.
- Applicants for all other projects should submit a cost estimate sufficient to justify the costs associated with each task.

Water Quality and Public Health Improvements Form

Scoring

This form is worth up to **250 total points** as follows.

- **Up to 50 points:** How severe is the water quality problem and how well is it defined?
- **Up to 100 points:** The project will achieve substantial water quality and public health benefits.
- **Up to 50 points:** Project success can be measured, and the proposed methods to measure success are reasonable.
- **Up to 50 points:** The project will provide long-term water quality benefits. Systems are in place to sustain the benefits after funding support has ended.

Guidance

- Evaluators award points for improvements and protection of water quality and public health. Projects that provide substantial environmental and public health improvements receive the most points. Projects that provide measurable improvements receive more points than those with unclear or vague benefits.
- Evaluators consider only the actual benefit, total impact (area impacted, number of people affected, resource affected), level of implementation, and the severity of the problem.
- Evaluators consider only changes that can be achieved by the proposed Scope of Work.
- A minimum score of 125 points on this form is required to obtain funding.
- Ecology uses the score on this form as the primary tie-breaker for overall points. If two projects have the same overall score, Ecology will place the project that scores higher on this form above the other on the priority list. In cases where both applicants receive the same score on this form, Ecology will use the score from the Readiness to Proceed Form as the secondary tie-breaker.

Coordination With State and Federal Priorities Form

Scoring

This form is worth up to **100 total points** as follows.

- **Up to 100 points:** How well does the project address a current permit requirement or TMDL implementation? **OR** How well does the project address other state or federal water quality requirements? **OR** How well does the project address the Puget Sound

Partnership Action Agenda or current approved plan or program specifically designed to address water quality problems? **AND** How well does the applicant and the project address greenhouse emission reductions in accordance with RCW 70.235.070?

Guidance

- Evaluators award points for projects that address state and federal requirements, projects that address permit requirements, projects that are recommended in approved TMDLs, and projects that are in-line with other state and federal priorities (e.g., permit requirements, watershed plans, Puget Sound Partnership Action Agenda, salmon recovery plans).
- Evaluators award points for straight-to-implementation proposals based on the link between the proposal and the ability to meet water quality standards.
- Evaluators also consider greenhouse gas emission reduction measures by the applicant and the project.

Project Team Form

Scoring

This form is worth up to **50 total points** as follows.

- **Up to 20 points:** Team members’ roles and responsibilities are well defined and adequate for the Scope of Work.
- **Up to 20 points:** Team members’ past experience is relevant.
- **Up to 10 points:** Staffing commitment is well described.

Guidance

- Evaluators award points based on knowledge, skills, abilities, qualifications, and experience of the established or potential project team members.

Project Development, Local Support, and Past Performance Form

Scoring

This form is worth up to **75 total points** as follows.

- **Up to 20 points:** A comprehensive decision making process was used to arrive at the proposed project.
- **Up to 20 points:** Plans for long-term project success and sustainability were considered during project development.
- **Up to 20 points:** The level of local support and commitment for the project.
- **Up to 15 points:** Past performance on other water quality projects, including Ecology funded projects.

Guidance

- Evaluators award points based on project development efforts and commitments from project partners.
- Evaluators will consider past project successes, including outcomes achieved and performance on project deliverables.

Readiness to Proceed Form

Scoring

This form is worth up to **75 total points** as follows.

- **Up to 75 points:** Project elements are in place for the project to proceed and documentation is provided.

Guidance

- Evaluators award points based on how soon a project can begin.
- Projects that rely on landowner cooperation will receive points for documenting landowner commitment for the proposed project.
- Ecology uses the score on this form as the secondary tie-breaker. If two projects have the same overall score and the same score on the Water Quality and Public Health Improvements Form, Ecology will place the project that scores higher on this form above the other on the priority list.

Financial Hardship Form

Scoring

This form is worth **0 or 50 points** as follows.

- **0 points:** If the applicant does not meet the criteria for financial hardship.
- **50 points:** If the applicant meets the criteria for financial hardship.

Guidance

- Evaluators award 50 points to wastewater facility construction projects in communities with less than 25,000 residents where the project costs may result in sewer fees greater than 2% of the median household income of the community.
